Author India. Govt.

Title Prices & wages in India. 1917

This book should be returned on or before the date last marked below.

NO. I.—INDEX NUMBERS OF RUPEE PRICES

(See Appendix A, page 195.)

QUINQUENNIAL AVERAGES

Rice and Wheat

Cotton and Jute

ANNUAL AVERAGES

Rice and Wheat

Cotton and Jute

NOTE:—1. The basic or standard period (100) is the average price of the decennium 1904-13.

2. The statistics are wholesale prices, except in the case of Wheat, for which retail prices have been taken, wholesale prices not being readily available.

3. For Wheat the quality is average or ordinary; Rice—the average of Moonghy and Bullam; Cotton, raw—Branch, and Jute, raw—average of picked [C. D. M. & Co., (Red) group (spot)] and Ordinary (⊗ group) "pukka" bales.

NO. 2.—DECENNIAL AVERAGE INDEX NUMBERS OF CURRENCY PRICES, CURRENCY WAGES, REAL WAGES AND PRICES OF FOOD-GRAINS IN INDIA FROM 1890-99 TO 1903-12.

NOTE:—

- (1) Currency Wages curve is based on figures on pages 2-3 of Prices Enquiry Report, Vol. III
- (2) Food-grains Prices curve is based on figures on pages 280-281 of Prices Enquiry Report, Vol. II
- (3) Currency Prices curve is based on figures on page 277 of Prices Enquiry Report, Vol. II
- (4) Real Wages curve is based on figures on pages 192-193 of Prices Enquiry Report, Vol. III

No. 3.—ANNUAL AVERAGE INDEX NUMBERS OF CURRENCY PRICES, CURRENCY WAGES, REAL WAGES AND PRICES OF FOOD-GRAINS IN INDIA FROM 1890 TO 1912.

(Average of 1890-94 = 100.)

NOTE:—

- (1) Currency Wages curve is based on figures on pages 2-3 of Prices Enquiry Report, Vol. III
- (2) Food-grains Prices curve is based on figures on pages 280-281 of Prices Enquiry Report, Vol. II
- (3) Currency Prices curve is based on figures on page 277 of Prices Enquiry Report, Vol. II
- (4) Real Wages curve is based on figures on pages 192-193 of Prices Enquiry Report, Vol. III

5. War Prices and House Rents at the end of December 1917. Re. 1-1.
6. Rise in prices at the end of November 1918. Anna 1.

INTRODUCTORY NOTE.

Scope and Source of the Statistics.

This Volume is the thirty-fourth of the series which was commenced in 1878. It includes statistics up to the year 1917, and in some cases up to 1918.* In the Appendix war prices and freights have been brought up to December 1918.

2. As in the three previous issues (which were in reality the first three of a new series), an attempt has been made to summarise, as well as to analyse, the movement in prices during recent years. The Volume is divided into three parts, viz. (1) Wholesale Prices, (2) Retail Prices, and (3) Wages. The Appendices include (1) the average prices of rice, wheat, cotton and jute, with index numbers which form the basis of chart No. 1 (Appendix A); (2) a list of articles for which wholesale prices are reported in the provinces and the number of marts in each reporting province (Appendix B); (3) the area and export statistics of certain staples, province by province (Appendix D); (4) quinquennial wage census returns (Appendix F); and (5) as already noted, prices and freights in Calcutta from the end of July 1914 to the end of December 1918 (Appendix G).

Three charts have been inserted showing (1) index numbers of prices of rice, wheat, cotton, and jute, (2) decennial average index numbers of currency prices, currency wages, real wages, and prices of food-grains, and (3) annual average index numbers of currency prices, currency wages, real wages and prices of food-grains.

3. **Wholesale Prices.**—The sources of the statistics in Tables 1 to 8 are mainly the fortnightly returns from selected markets in each province furnished by local authorities and the market reports published by Chambers of Commerce. The fortnightly wholesale prices are those governing a wholesale transaction on the last day of each fortnight, or the nearest market day, and unless wholesale transactions have actually taken place, no prices are quoted. The prices are only quoted for those markets where the articles in question are staples of local trade. The returns are forwarded by District Officers to the Director of Agriculture or Land Records, and, in the case of Madras, to the Board of Revenue. After examination, the returns are forwarded to this Department. It may be noted that a wholesale transaction is taken to be one in which not less than 10 maunds of food-grains, seeds, grass and straw, and one maund of other articles such as turmeric, tobacco, etc., change hands. In the case of live-stock, prices are quoted per score in the case of sheep and per pair in the case of bullocks. The total number of articles for which wholesale prices are reported, as shown in Appendix B, is 50, and there are 120 separate marts from which reports are received. Prices for 30 of these articles showing 71 marts are published fortnightly in the Supplement to the *Gazette of India*, and those for 25 articles, showing transactions in 92 marts, are recorded in this Volume. The prices quoted from the Chambers' market reports are those for the first week of January and July in each year, but where quotations are not available for the first week, those for the second or nearest week are taken.

Tables 9 to 12 deal mainly with prices of certain staple commodities in the United Kingdom which are compiled from the *Economist*, the *Corn Trade News*, etc.

4. Annual average prices paid by the Supply and Transport Corps for articles for consumption of troops at certain selected stations in India are also given in Tables 13 and 14. These are "contract prices" and do not always correspond with the market prices of similar articles mentioned in other tables. This may be, to some extent, due to the fact that the grade of the commodities is not the same in both cases, and also to the fact that contractors, owing to a steady demand for a comparatively large supply throughout the year, can afford to sell at a slightly cheaper price.

5. **Retail Prices.**—(Tables 15 to 18). The Retail Prices published in this Volume are those furnished fortnightly by local authorities under orders of the Government of India since 1872 and are the prices at the District Head-quarters. It may be noted that the districts in each Province are roughly grouped together into homogeneous circles, with special reference to their climatic character and their rainfall. Averages are struck for each group as well as for each Province. The district returns are supplied, as in the case of wholesale prices, by District Officers to the Director of Agriculture or Land Records, and, in the case of Madras, to the Board of Revenue. Unlike wholesale prices, they are in every case the prices in the Head-quarters of the districts and are quoted usually in sers (of 80 tolas) per rupee. For the sake of comparison, however, with wholesale prices they have been quoted as the price (in rupees) per maund of 82.286 lbs.

6. **The Checking of Prices Returns.**—These statistics of prices when furnished to this Department are examined with the prices in neighbouring districts and are also compared with the wholesale prices of the same article for the same district and the neighbouring districts. Discrepancies which occur are brought to the notice of local authorities from time to time.

7. **Wage Statistics.**—The Wage statistics in Table 19 for Baluchistan and certain Indian States are compiled from half-yearly returns furnished by Political Officers. They are the monthly averages of the wages paid to certain labourers and artisans in each district during the last six months of each year. Owing to the somewhat problematical accuracy of these half-yearly returns, they have been discontinued in all the British Provinces in India except British Baluchistan. In their place a quinquennial wage census has been substituted except in the Central Provinces, where an annual return is in vogue.† The first quinquennial wage census was taken in 1911-12 and the second in 1916-17 ‡ and the figures of these censuses have been consolidated and

* The previous volume had figures up to 1916 and in some cases up to 1917.

† Vide Table No. 20, pages 162-167.

‡ In Coorg the census was taken in August 1918.

inserted in the Volume as Appendix F. Tables 21 and 22 are compiled from returns furnished by the Post Office, State Railways, workshops and business establishments, collieries, mills, etc. The question of the improvement of wage statistics, especially industrial wages, has been taken up by the Government of India.

8. Further details on the collection and compilation of these statistics of Prices and Wages will be found in Appendices B and G in Volume I of the Prices Enquiry Committee's Report.

Fluctuations in Wholesale Prices.

All-India Prices in 1917 as compared with 1916 and 1913

9. Comparison with 1916 (the preceding year).—The annual average wholesale price of 24 articles of country produce, including live-stock, in India was in 1917, 4 per cent higher than in 1916.

The articles which showed a rise were as follows :—Cotton (raw) (35 per cent), turmeric (28 per cent), ghee (9 per cent), ragi (5 per cent), sugar (refined), wheat, wheat (flour), jawar, and sesamum (4 per cent each), cotton seed and plough bullocks (3 per cent each), tobacco leaf (2 per cent), and mustard and rape seed (1 per cent). Linseed and sheep showed no fluctuation.

Those, on the other hand, which showed a fall were :—Jute (raw) (13 per cent), arhar dal (11 per cent), rice (9 per cent), barley (8 per cent), bajra (5 per cent), maize (3 per cent), and gram, sugar (raw), and poppy seed (1 per cent each).

10. Comparison with 1913 (the pre-war year).—The annual average wholesale price of the 24 articles referred to above, was in 1917, 8 per cent higher than in the pre-war year, 1913. Turmeric showed a rise of 60 per cent, sugar (refined) 50, sugar (raw) (gúr) 32, cotton (raw) 20, cotton seed 12, plough bullocks 18, wheat (flour) 16, wheat and gram 15 each, sheep 13, arhar dal 12, tobacco leaf 9, barley and maize 6 each, ghee 4, and jawar 2 per cent.

There was, on the other hand, a fall in the prices of poppy seed (27 per cent), jute (raw) (25 per cent), mustard and rape seed (19 per cent), sesamum (18 per cent), rice (9 per cent), ragi (7 per cent), and linseed (5 per cent). Bajra showed no change.

In short, the average prices for all India in 1917, as compared with pre-war prices, showed a rise in the case of foodgrains (except rice, ragi, and bajra), sugar, ghee, cotton (raw), cotton seed, turmeric, tobacco leaf, and live-stock, but a fall in textiles, oil seeds (except cotton seed), ragi and rice.

Wholesale Port Prices in 1917 as compared with 1916 and 1913*

11. Comparison with 1916 (the preceding year).—As compared with the preceding year prices of rice in 1917 showed a fall of 16 per cent in Rangoon, 13 per cent in Calcutta, and 1 per cent in Madras. Wheat prices rose by 16 per cent in Karachi, and 10 per cent in Calcutta. Jawar and bajra showed a fall of 12 and 6 per cent, respectively, in Karachi, and gram advanced by 2 per cent in Calcutta. There was a fall of 10 per cent in the price of arhar dal and of 6 per cent in that of raw jute in Calcutta. The percentage rise in the price of raw cotton was 50 in Calcutta, 37 in Karachi and 34 in Madras. Raw sugar (gúr) advanced by 13 per cent in Calcutta but fell by 10 per cent in Madras. The price of ghee showed a rise of 19 per cent in Calcutta, but a fall of 3 per cent in Madras. There was a fall of 3 per cent in the price of cotton seed in Karachi. Rape and mustard seed showed an advance of 5 per cent and linseed a decline of 6 per cent in Calcutta. There was a rise of 23 per cent in the price of turmeric and of 2 per cent in that of tobacco leaf in Madras.

12. Comparison with 1913 (the pre-war year).—Compared with the pre-war year (1913) the price of wheat in 1917 showed a rise of 23 per cent in Karachi and 18 per cent in Calcutta, while that of rice showed a fall of 28 per cent in Rangoon, 8 per cent in Calcutta, and 3 per cent in Madras. The price of Jawar fell by 8 per cent and that of bajra by 1 per cent in Karachi. Arhar dal showed a rise of 11 per cent and gram of 2 per cent in Calcutta. The rise in the price of raw sugar (gúr) was 40 per cent in Calcutta and 25 per cent in Madras. Ghee showed a rise of 16 per cent in Calcutta and 3 per cent in Madras. The price of raw cotton advanced by 43 per cent in Madras and 36 per cent in Karachi, but fell by 16 per cent in Calcutta. Raw jute, rape and mustard seed, and linseed also showed a fall of 6, 24, and 2 per cent, respectively, in Calcutta. Prices of turmeric and tobacco leaf advanced by 24 and 5 per cent, respectively, in Madras.

Fluctuations in Retail Prices

All-India Prices in 1917 as compared with 1916 and 1913

13. There was a general decline in the retail prices of food-grains in 1917 as compared with the previous year, but a general advance (except with regard to rice, jawar, kangni and maize) as compared with 1913, the pre-war year, the average fluctuation for all India in 1917 being a fall of 2 per cent as compared with 1916 but a rise of 5 per cent as compared with 1913. Salt showed a rise in 1917 as compared with both 1916 and 1913. The rise in 1917 as compared with 1913, the pre-war year, was in salt 51 per cent, gram 14 per cent, wheat and arhar dal 12 per cent each, barley 7 per cent, and bajra and ragi 1 per cent each. Rice showed a fall of 4 per cent. Prices of jawar and maize recorded no fluctuation.

* Based on Tables 1 and 2 of the volume which are compiled from fortnightly returns furnished by local officers.

*Retail Port Prices * in 1917 as compared with 1916 and 1913.*

14. **Comparison with 1916 (the preceding year).**—The retail price of rice in Karachi rose by 18 per cent; on the other hand, it fell by 14 per cent in Calcutta, 17 per cent in Rangoon, and 1 per cent in Madras. The increase in the price of wheat was 6 per cent in Bombay, and 16 per cent in Karachi. Jawar advanced by 18 per cent in Bombay but declined by 4 per cent in Karachi. The price of bajra showed a rise of 5 per cent in Bombay but a fall of 10 per cent in Karachi. There was an advance of 4 per cent in the price of ragi in Madras. Gram prices rose by 14 per cent in Bombay and 7 per cent in Karachi, but fell by 6 per cent in Rangoon. The price of arhardāl declined by 10 per cent in Calcutta, and 11 per cent in Karachi, but it rose by 3 per cent in Rangoon. The rise in the price of salt was 12 per cent in Calcutta, 27 per cent in Bombay, 17 per cent in Karachi, 13 per cent in Madras and 2 per cent in Rangoon.

15. **Comparison with 1913 (the pre-war year).**—The retail price of rice in Calcutta, Madras and Rangoon declined by 6, 1 and 28 per cent, respectively, but that in Bombay rose by 9 per cent and in Karachi by 17 per cent. Wheat prices advanced by 6 per cent in Bombay and 29 per cent in Karachi. The price of jawar rose by 9 per cent in Karachi and 1 per cent in Bombay. Bajra showed a rise of 29 per cent in Bombay and 2 per cent in Karachi. There was an increase of 7 per cent in the price of ragi in Bombay but a fall of 4 per cent in Madras. The advance in the price of gram was 28 per cent in Bombay, 24 per cent in Karachi, and 1 per cent in Rangoon. Arhardāl showed a rise of 16 per cent in Calcutta, 28 per cent in Bombay, 26 per cent in Rangoon, and 8 per cent in Karachi. The price of salt rose by 94 per cent in Calcutta, 42 per cent in Madras, 36 per cent in Karachi, 32 per cent in Bombay and 27 per cent in Rangoon.

Prices and Freights in Calcutta at the end of December 1918.

16. The Tables in Appendix G show the movement in Calcutta of wholesale prices of 75 principal articles of consumption and of retail prices of 46 articles of food at the end of each month since the outbreak of war, from July 1914 to December 1918. They also show the rates of freight from Calcutta during the period. Wholesale prices are compiled from the Calcutta Price Current and Money Market Report published by the Bengal Chamber of Commerce and "Capital," retail prices are compiled from the Calcutta Municipal Market Report, and the rates of freight from the Calcutta Price Current and Money Market Report.

17. **Prices.**—The average rise in the *wholesale* prices of all the 75 articles was 12 per cent at the end of the first year of war, 25 per cent at the end of the second year, 42 per cent at the end of the third year, 78 per cent at the end of the fourth year, and 88 per cent at the end of December 1918, above the level of July 1914, the period just before the outbreak of war.

The most remarkable rise in the groups of articles at the end of December 1918, as compared with the price at the end of July 1914, was in cotton manufactures (199 per cent) and metals (188 per cent). The rise in cotton (raw) was 167 per cent, sugar 82 per cent, food grains, jute manufactures and other textiles 53 per cent each, and other raw and manufactured articles 89 per cent. On the other hand, tea showed a fall of 12 per cent. The group other articles of food comprising condiments, spices, ghee, and salt, showed an increase of 127 per cent.

18. The following articles showed fluctuations above 50 per cent :—

	Percentage of rise.		Percentage of rise.
Salt, Deshi, Bombay, Karkatch . . .	380	Kerosene oil (Chester) . . .	112
„ Spanish (ex-golah) fine . . .	298	Sugar, Cossipore, Grey, No. 2 . . .	108
„ Liverpool (ex-golah) . . .	269	Wheat . . .	95

Cotton, fine ginned, Bengal . . .	152	Wool, raw . . .	56
Indigo . . .	114	Mustard oil, 2nd quality . . .	54

The general level of *Retail prices of food stuffs* in Calcutta at the end of December 1918 showed a rise of 34 per cent, as compared with the period immediately before the outbreak of war. Prices of sugar and salt rose by 91 and 100 per cent, respectively. Dairy products (milk, etc.) advanced by 64 per cent. Prices of tea, wheat flour, and "fruits and vegetables" rose by 19, 59, and 39 per cent respectively. Food-grains (cereals and pulses) increased by 40 per cent. Pulses separately showed a rise of 49 per cent and rice 5 per cent. There was an increase of 4 per cent in the price of fowls, but a fall of 18 per cent in that of fish, 27 per cent in eggs, and 6 per cent in meat. Mustard oil advanced by 50 per cent.

* Based on Tables 15 and 16 of the volume which are compiled from fortnightly returns furnished by local officers.

19. The following statement compares the rise in food-prices in Calcutta at the end of December, 1918, with that in certain other countries abroad as far as data are available :—

Country or town.	Percentage rise as compared with July, 1914	Country or town.	Percentage rise as compared with July, 1914
	Per cent.		Per cent.
Sweden (Oct., 1918)	210(a)	Holland (Amsterdam) (Dec., 1918) .	103
Norway (Dec., 1918)	175	Denmark (Jan., 1919)	86
Vienna (Aug., 1917)	173	Canada (Dec., 1918)	84
Italy (Rome) (Nov., 1918)	149	United States (15 Sep., 1918)	7½(c)
France (Paris) (Jan., 1919)	148	New Zealand (Jan., 1919)	45
Switzerland (Dec., 1918)	132(b)	South Africa (Cape Town) (Nov., 1918)	42
United Kingdom (1st Jan., 1919)	130	Australia (Dec., 1918)	35
Berlin (Nov., 1916)	111	Calcutta (unweighted) (Dec., 1918) .	34

Note.—The figures for Berlin and Vienna are based on artificially fixed maximum prices and are not therefore comparable with those for the other countries.

20. **Freights.**—Freights from Calcutta, which reflect generally the rates ruling at the other Indian ports showed a downward tendency at the end of December 1918. The rates for many articles owing to scarcity of tonnage and restrictions in business were nominal. The freight for jute to the United Kingdom, which advanced as high as about 18 times the pre-war rate, came down to 11 times in December 1918. The following table shows the level of freights at the end of each year since 1914, as compared with July, 1914 (the pre-war period):—

Index numbers of freight rates from Calcutta to the United Kingdom.

Articles.	End of July 1914.	END OF DECEMBER.				
		1914	1915	1916	1917	1918
Rice and wheat	100	180	600	1,450	1,450	Nominal.
Cotton	100	173	547	1,300	1,300	Do.
Tea	100	120	136	136	857	Do
Hides	100	120	312	900	900	1,320*
Jute	100	173	547	1,300	1,778	1,111
Shellac	100	160	380	1,067	Nominal	933

Wages.

21. The half-yearly statistics of wages of skilled and unskilled labour paid in districts of British India are, for reasons already explained, no longer available. A quinquennial wage census, the first of which was taken in 1911-12, and the second in 1916-17†, was instituted in place of these half-yearly returns. The returns for the Central Provinces are, however, now annual. Wages in the Central Provinces from 1909-10 to 1916-17 will be found in Table No. 20. The wage statistics collected in the first and second quinquennial wage censuses have been incorporated in the Volume as an Appendix.

22. The wage statistics of the Central Provinces for 1916-17 show that there was no great fluctuation in the rate of wages as compared with the previous year. The general standard of wages was not adversely affected over the greater part of the cotton tract as the price of cotton was high throughout the year, and the labour available was not equal to the steady demand for it in the Cotton Mills, Cotton Factories and Oil Mills. The abnormally high rainfall of the year resulted moreover in a luxurious growth of weeds, and much more labour than usual was required for the weeding of cotton and jawar. All over the rice tract the crops were good and wages remained normal throughout the year. Provinces other than the Central Provinces do not prepare annual returns.

Industrial Wages.

23. It appears from the returns received from some leading industrial establishments in India that, except in the paper industry of Bengal and the rice milling industry of Burma, there was a general rise in wages in 1918, as compared with last year as well as with the prewar period. The general averages of index numbers computed on the rates of wage earners in different industries during January of each year from 1915 to 1918 as compared with the prewar period (January 1914) are stated below :—

Movement of Industrial Wages.

Industries.	1914	1915	1916	1917	1918
Cotton, Bombay	100	103	103	106	129
Wool, Cawnpore	100	112	108	117	118
Mining (Coal), Bengal	100	100	100	108	116
Tea, Assam	100	102	103	109	119
Brewing, Punjab	100	102	109	121	130
Jute, Bengal	100	101	100	101	103
Paper, Bengal	100	99	99	99	100
Rice, Rangoon	100	100	100	100	100

* Relates to May 1918, later quotations not being available.

(a) Including fuel and lighting.

(b) Compared with 1st June 1914.

† In Coorg the census was taken in August 1918.

(c) Compared with 15th September 1913.

It would appear from the above table that, as compared with the prewar period, wages in 1918 increased by 30 per cent in the brewing industry of the Punjab, 29 per cent in the cotton industry of Bombay, 19 per cent in the tea industry of Assam, 18 per cent in the woollen industry of Cawnpore, 16 per cent in the mining industry and 3 per cent in the jute industry of Bengal. As compared with the previous year, the average rise in the cotton industry was 22 per cent, in the tea industry 9 per cent, in the mining and brewing industries 7 per cent each, in the jute industry 2 per cent, and in the woollen and paper industries 1 per cent. The rice industry shows no change. It should be noted, however, that the returns dealt with refer generally to a representative mill in the chief locality of the industry, since returns are not yet received of wages paid in the various mills of each industry. The Government of India have addressed Local Governments on the question of the systematic collection of information relating to wages.*

Agricultural Wages.

24. The following extracts from the Provincial Season and Crop Reports for the year 1917-18, supplemented by those from the Administration Reports for the year, on the wages of the agricultural population are interesting :—

Bengal.—The general rates of agricultural labourers are reported to be practically the same as in the previous year although a large number of men were recruited for work in connexion with the war.

Bihar and Orissa.—The rates of wages of the previous year were generally maintained and the supply of labour was on the whole equal to the demand. The agrarian developments in Champaran somewhat affected the rates of wages in that district.

United Provinces.—Labour was in demand throughout the year, both for agriculture and industries, and wages showed a tendency to rise further. In the western districts there were complaints of scarcity of labourers for field operations and some difficulty was experienced in cutting and crushing the sugarcane crop. The labour corps offered exceptional inducements to the younger and more enterprising men.

Punjab.—The material prosperity of the agricultural population maintained its former level. The *Rabi* harvest was excellent, the prices of agricultural produce and wages were high, and the continuous recruitment for the army provided the agricultural population with a widening field of employment, and an expanding source of income.

Central Provinces and Berar.—Wages were high during the year, and in most parts of the provinces the condition of all classes was satisfactory and ample employment was available.

Bombay.†—Scarcity of labour coupled with the great rise in prices of all commodities rendered any lowering of wages impossible. The tendency was in the opposite direction and wages rose further in the year under review in almost all the districts in the Presidency proper. In Kolába and West Khándesh they were stationary. In other districts the rate for unskilled labour ranged generally from 6 to 8 annas a day, but in parts of Tháná, Poona and Ahmednagar it went up to 10 and 12 annas. During the wheat harvest and cotton-picking season even higher rates were demanded and paid, and a daily wage of Re. 1 could be earned in Ahmedabad, Broach, and Ahmednagar. In Sind, where wages are generally higher than in the Presidency proper, the high level which they had reached was either maintained or raised still further, the contributing causes, besides rise in prices, being a smaller influx of labourers from Cuttá and Márwár and the prevalence of malaria.

Madras.†—In the cotton tracts cooly classes were getting excellent wages up to 8 annas per day for men in the ceded districts and 4 to 6 annas per day for women in Tinnevely. But the cost of food grains and clothing was rapidly increasing also, and there can be no doubt that the working classes were feeling the pinch in many places owing to the rise of wages not keeping pace with the rise in the cost of living. Similarly in the rice tracts the cooly classes, although securing sufficient actual food from their wages paid in kind, were hard put to it to purchase cloths.

Delhi.†—Though there were general complaints of a dearth of labour as a direct result of the war, the wages of skilled and unskilled labour did not increase to any appreciable extent.

Burma.—Agricultural wages remained practically the same as last year. Owing to the difficulty of transport and the demand for labour in India there was a still further decrease in the number of Indian coolies coming to Burma, but the effect on the labour market was less than might have been anticipated. Temporary emigration from Upper Burma to Lower Burma again decreased considerably, mainly no doubt in consequence of the good harvests and the recruitment for the Labour Corps and for Burma Regiments.

DEPARTMENT OF STATISTICS, INDIA.

Calcutta, July 7, 1919.

G. FINDLAY SHIRRAS,

Director of Statistics.

(a) A morah is twenty hanks equal to 16,800 yards

(b) White, 40s, No. 40

(c) Price in January 1888

(d) " " " 1892

(e) " " " 1873

(f) Orange, No. 40s from July 1893

(g) British red, 40s full weight from January 1900

NOTE.—The quotations for Calcutta are taken from the Price Current and Market Report of the Bengal Chamber of Commerce. The price of coal at Bombay is taken from the Bombay Market Report, and of gold from the Calcutta Price Current, and the prices of Mauritius sugar, and silk are reported monthly by the Commissioner of Customs, Bombay. The average price of bar silver in London is taken from the daily quotations of the Bank of Bengal.

The prices quoted are those for the first week of January and July in each year, but where quotations are not available for these weeks, for the nearest period.

(a) Cleveland No. 3 from 1905 to 1916 (b) G. M. B. from 1905 and Standard from 1911 (c) Standard from 1912 (d) Middling American from 1905
(e) Well from 1905 (f) Dutch creameries from 1901 to 1914, Danish from 1915 (g) Coffee (Ceylon) was changed to coffee (E. I. Plantation) in 1890 (h) Bengal from 1912
* Price in 1874 * English shillings (i) Price in 1874 (j) Best Yorks Silks * Lincoln Hogs in 1916 and Lincoln half Hogs in 1917
Note—The prices in this table, excepting those of wheat and bar silver, are the annual averages of prices reported in the monthly Trade Supplement to the Economist up to 1916 and those in the annual commodity review published in the Economist from 1917, the publication of the former having been discontinued from that year; prices of wheat are taken from the Corn Trade News as in the case of table No. 9 and those of bar silver are taken from quotations reported by the Bank of Bengal. Quotations for iron, wool and tea are compiled from the Statist from 1917.

No. 11—VARIATIONS in the PRICES in TABLE No. 10, the PRICES of 1873 being taken as 100

NOTE.—In this table, the variations in the prices of gold (measured in silver) are arrived at by multiplying the price of bar silver in London in 1873 (59½d. by 100 and dividing the product by the price of bar silver in the particular year.

Example—Price of silver in 1899 = 27½d. (table No. 10); price of silver in 1873 = 59½d.; price of gold in 1873 = 100. The variation in the price of gold in 1899 is then worked out thus—27½ : 59½ :: 100 : 215.

The variations in the prices of the other articles in this table are calculated thus : As the variation in the price of gold in table No. 11 is to the variation in the price of gold in this table, so is the variation in the price of the article in table No. 11 to the variation required.

Example—Variation in the price of gold in table No. 11 = 100; variation in the price of gold (measured in silver) in 1899 in this table = 215; variation in the price of copper (measured in gold) in 1899 = 86 (table No. 11). Therefore—100 : 215 :: 86 : 185.

(a) Price of 1874 being taken as 100

NOTE 1.—The figures in this table are furnished by Political Officers.
 NOTE 2.—The half-yearly wage statistics for British India, which were published in previous issues of the volume, were omitted from the table last year. As stated in previous issues, these half-yearly returns have been discontinued and substituted by annual returns in respect of the Central Provinces and quinquennial returns for the other Provinces. (Vide Table No. 20 and Appendix X.)

N. B.—The figures relate generally to the developed tracts of the Sudder Tahsil of each district.

(a) Homogeneous rabi growing tracts.

(b) Also gets a head-load of unthreshed grain yielding 25 seers at the time of sowing and 5 seers after sowing.

(c) Carpenter is paid 31½ seers of grain per plough annually.

(d) Not available in the interior. They are sent for from Seoni Town and paid at rates prevailing in Seoni. In addition they are given food.

(e) Relates to Jalgaon Taluq.

(f) Carpenters get Re. 1-4-0 per annum for each plough. They get 12 annas for preparing each mayal for a house. 2 seers of grain are given at sowing time and 5 seers at harvesting time.

(g) Village carpenter, as a rule, gets one maund of grain per plough for making and repairing implements of husbandry.

(h) Masons are not generally employed but whenever required they are given from 6 to 8 annas.

(i) These men go from town to work in the interior.

PROVINCES and BERAR during the years* 1909-10 to 1916-17

* Ending the 30th June.

(a) Carpenters get Re. 0-12-0 to Re. 1-4-0 per annum for each plough. They get 12 annas for preparing each mayal for a house : 10 seers of grain are given at sowing and harvesting time.

(b) These men go from town to work in the interior.

(c) Masons are not generally employed but whenever employed they get 6 annas to Re. 1 per day.

(d) Carpenters generally receive grain valued at Re. 0-12-0 to Re. 1-4-0.

(e) Figures relate to the developed tract of the Khandwa Tahsil.

(f) Carpenters are employed on daily wages when required but they get 12 annas to Re. 1-4-0 per plough and in addition 10 to 15 seers of grain at sowing and harvesting time. They also get 12 annas per mayal for roofing village house.

(g) Masons are not regularly employed and whenever they are required they are paid at the rate of 8 annas to Re. 1 per day in cash and food.

(h) Carpenters employed on agricultural work are generally paid in kind.

* Monthly average for the year

(a) Rate for 1867

(b) Rate for 1866

(c) Rate for 1863

(d) Rate for 1877

NOTE.—The figures in table No. 21 (3) are furnished by the Agent, E. I. Railway. The figures for Mirzapur represent the highest and lowest wages paid to each class of workmen during January of each year and those for Cawnpore and Delhi show the average pay per month (calculated on the total highest and lowest salaries) drawn by skilled and unskilled labour.

† The rise in the rates is due to general increases sanctioned to the staff for long service and good work.

NOTE.—The figures in table No. 21 (5) are furnished by the Agent, N. W. Railway.

The monthly rates are arrived at by dividing the total amount of the monthly earnings of men of each class of labour by the total number of men employed and the daily rates are worked out in dividing the monthly rates by the actual number of working days excluding Sundays and holidays during the month.

* The large fluctuations in the current rates as compared with those for last year are due to the grant of special increases (war and famine allowance).

—No. 21 (7)—Average daily wages (in annas) on the Orissa Canals

[Where no rates are quoted, no information was received]

NOTE 1.—The figures are furnished by the Government of Bihar and Orissa, Irrigation Branch, Public Works Department. The rates have been calculated by taking the averages of the daily wages which are usually paid in the several sub-divisions of the respective divisions.

2.—Under the orders of the Government of Bihar and Orissa, Public Works Department, No. 2833-E., dated the 25th February 1916, the Mahanadi and Brahmini-Baitarni Divisions were reconstructed and their names altered to the Cuttack and (New) Mahanadi Divisions, respectively, with effect from 1st April 1916.

No. 21 (8)—Variations in the average daily wage rates in table No. 21 (7), the rates for 1873 being taken as 100

* Monthly average for the year.

† Rate for Stoker.

‡ " " Motorman.

NOTE.—These monthly wage rates before 1904 relate to a working day of eight hours. From 1904 the working day for vicemen, blacksmiths and carpenters is from 8 A.M. to 5 P.M.—9 hours; for the remainder 6 A.M. to 6 P.M., with an interval during the day. The rates previous to 1906 were those paid in the Bally Paper Mills which the Titaghur Paper Mills then took over. The rates since 1906 refer to those paid in the Titaghur Paper Mills.

NOTE.—The figures for Raniganj, Nimcha and Kuldiha previous to the years 1897, 1913 and 1904 respectively represent monthly rates, a daily rates are not available.
 * At Nimcha colliery miners do not work on fixed daily wages but are paid from 6 to 7 annas for each tub of coal they cut and this makes an average of about 12 annas a head per day. The blacksmiths also work on monthly wages varying from 15 to 20 rupees and 18 to 25 rupees a month in the year 1917 and 1918 respectively and this makes a corresponding average of 10 and 12 annas per head daily.
 (a) closed (b) Belates to Dhubidih colliery

Notes.—(1) The figures in table No. 22 (9) are obtained through the Government of the United Provinces, Buildings and Roads Branch, Public Works Department. The rates are arrived at by dividing the total amount of earnings of each class of labour per day by the total number of men employed.

(2) The rates in table No. 22 (10) are obtained by dividing the actual amount of wages paid to each class of labour in the month by the number of men employed in the different departments.

NOTE.—The figures in the above table represent the actual wages paid by the mill in typical cases. With reference to the fall in the wages for 1916 of 'Head mistry Card Room' (column 2) the firm said that the two chief men, who had been in their employ for a long time, had retired and been succeeded by men much their juniors and drawing much less pay. The fall in wages of this class in that year is, therefore, more apparent than real.

* Head knitter.

† In addition to these wages an all round increase of 15 per cent is granted as temporary war allowance.

NOTE.—(1) The difference in the wages (though fixed) of a 'side minder' in Ring Throistle Room is owing to the wages being fixed according to different counts of yarn,
(2) The great variation in the wages of a 'weaver' in Weaving Department is on account of the different rates for the out turn of various sorts and qualities of cloth.

1898	Ditto	Ditto	
1899	Ditto	Ditto	
1900	R6 per month.	4 annas and 3 annas for 25 nulls.	
1901	Ditto	3 annas for 25 nulls.	
1902	Ditto	4 annas for 30 nulls and 3 annas for 25 nulls.	This rate was later in the year reduced to 4 annas for 25 nulls and 3 annas for 20 nulls.
1903	Ditto	4 annas for 25 nulls and 3 annas for 20 nulls.	
1904	Ditto	Ditto
1905	Ditto	Ditto
1906	Ditto	Ditto
1907	Ditto	Ditto
1908	Ditto	Ditto
1909	Ditto	Ditto
1910	Ditto	Ditto
1911	Ditto	Ditto
1912	Ditto	Ditto
1913	Ditto	Ditto	The rate of day-labourer has been raised to 2 annas per day.
1914	Ditto	Ditto	Wages generally are increasing in Assam.
1915	R7 per month for 25 nulls ($\frac{1}{2}$ of an acre) daily, or 4 annas for 25 nulls light hoeing. No bonus. Rs per cooly allowed for road expenses.	Ditto
1916	Ditto	Ditto
1917	Ditto	Ditto
1918	Ditto	Ditto

* NOTE.—Scale of pay prescribed by Act I of 1882:—

Men,	first three years of service—	R 5 per month
"	4th and 5th "	" 6 "
Women,	first three "	" 4 "
"	4th and 5th "	" 5 "

As amended by Act VI of 1901:—

Men,	first year of service —	R 5 per month
"	2nd and 3rd year "	" 5-8 "
"	4th year "	" 6 "
Women,	first year "	" 4 "
"	2nd and 3rd year "	" 4-8 "
"	4th year "	" 5 "

During the first 6 months of contract the employer has to pay full wages for half a daily task unless the Inspector certifies otherwise.

NOTE.—(1) These statistics are compiled from the "Resolution on Immigrant Labour in Assam" and they are the average monthly cash wages, calculated on the wages earned by the total number of coolies on the books during the months of September and March, including (fee, diet, rations, subsistence allowance, and bonus per head.

(2) The provincial averages are not the means of the district averages but are calculated independently by dividing the total earnings of two typical months (September and March) by the total number of coolies on the books.

(3) The blanks in the table (a) indicate that no Act-Labourers were employed.

1918	2	3.9	3.37	1.5	4.85	4.85	5.85	1	.45

NOTE.— (1) The rates are arrived at by dividing the total amount of wages of each class of labour paid over 4 weeks by the number of weeks or days and the number of hands employed.
(2) Towards the end of 1916 a change was made from working the mill 11 hours a day on the single shift system to working 13½ hours per day on the three shift system. The result is a slight increase in *Pieceworkers'* wages owing to larger production without a corresponding increase in hands; while *daily workers'* wages are slightly reduced, as their actual working hours have been decreased and number of hands increased.

APPENDIX C.

Summary of the variations in prices of food-grains and salt in each quinquennium from 1861-65.

A general rise of prices took place about 1860. With the suppression of the Mutiny and the transfer of the administration to the Crown, there commenced a new era of commercial and industrial activity. The resources of the country were developed by the construction of roads and railways, the improvement of harbours, and the extension of irrigation. The cotton famine caused by the American War of Secession (1861-65) gave a great impetus to the cultivation of cotton in India, which, while the war lasted, brought large profits to the cultivator and the merchant. The influx of the precious metals which had begun about the time of the Mutiny was thus further stimulated, and from about the second year of the war a great rise of prices took place throughout the cotton-growing districts of western and central India, as also in a smaller degree in other parts of the country. Prices were also raised by the famine of 1861 in the Upper Doab of the province of Agra and the neighbouring districts of the Punjab and Rajputana and by the scarcity in Cutch.

On the collapse of the inflation caused by the American war, prices would have fallen but for the great famine of 1866 in Orissa, which extended into Bengal proper, Bihar, Madras, and the eastern part of the Central Provinces. Another notable famine—that of 1869—affected western Rajputana and parts of northern India, and the extension of scarcity, towards the west and south, produced a rise of prices in Bombay, the Central Provinces, and Hyderabad.

During 1871-75 prices were not seriously disturbed by any calamity except the scarcity in Bihar of 1874 and although large purchases of grain were then made by the Government and scarcity prevailed in the adjoining districts of the United Provinces, the disturbance of prices was not widely felt. The export trade in rice expanded greatly in 1872-73, and was on a large scale throughout the decade 1871-80. It showed greater contraction in 1874, the year of the Bihar famine than in the Deccan famine three years later.

In this quinquennium occurred the great famine of 1877-78, which affected an enormous tract in western and southern India and extended with diminished intensity into the north, causing a general rise of prices of food-grains all over India. The export trade in wheat, which had begun in a small way after the opening of the Suez Canal in 1870, received a check in the years 1878-80.

Speaking generally, all crops except rice were good or abundant during these years, though there was scarcity in a portion of the Punjab in 1884 and distress in parts of Bengal and Madras in 1885. The rice crop was bad between 1883 and 1885 owing to drought and floods, but wheat was plentiful, and the average price for all grains was low.

It is difficult to find adequate reasons for the great rise in prices which took place during these five years, for the 1889 famine in Ganjam (accompanied by distress in Orissa and scarcity in Bihar) was only of local importance, and prices had already reached their highest point in 1888. The export trade in food-grains was not larger than in the preceding quinquennium.

The high prices ruling during 1886-90 were still further raised in 1891-92 by prolonged drought, causing scarcity and distress in Madras, Bombay, the Deccan, Bihar, and Upper Burma. A strong Indian demand for rice was coupled with large exports, and at the same time there was an unprecedented exportation of wheat owing to the failure of crops in Europe, so that Indian prices rose almost to famine levels. With better seasons prices fell, but the lowest point reached in 1891-95 was still above the average level of the previous quinquennium; and, as in that period, the importation of silver for coinage continued on a large scale until the closure of the mints in June 1893.

This quinquennium witnessed two distinct famines. The first one occurred in the latter part of 1896 and extended into 1897; and the second, occurred in the latter half of 1899 and continued, like the previous one, through the ensuing year. These famines bore a close resemblance to each other in this that they were more or less equally intense and equally widespread. The fall in prices associated with the closing year of the preceding quinquennium was thus one of short duration. In September 1896 a sudden rise took place in the prices of food-grains. In November, famine prices were declared in northern and central India, and soon after they became general. The autumn harvest of 1897 relieved the tension somewhat, and the bumper crops of 1898 saw prices assume a relatively low level. But this improvement was again not sustained, for the complete failure of the south-west monsoon in 1899 followed by poor winter rains reinduced famine prices in the following year. The monsoon of 1900 was more favourable than its predecessor; still it was not of such a character as to efface altogether the ill-effects of the previous season of drought.

There was no very marked return to ordinary price levels in 1901 and 1902 as the weather conditions were generally not favourable, except perhaps for rice. But in the next two years, and particularly in 1904, agricultural conditions were distinctly good, especially in the case of the wheat crop. There was in these two years a corresponding improvement in prices of food-grains, especially of rice and wheat; but a set-back was experienced in 1905. The seasonal conditions of that year were marred by a partial failure of the monsoon in northern and western India and by heavy rain and floods in Bengal and Eastern Bengal. A sharp and rapid rise in the prices of articles of Indian produce, especially food-grains, began in 1905.

APPENDIX C—*continued*

The rise was sustained in 1906 as the spring crops of that year, except wheat, were generally not good, and the autumn crops were damaged more or less by excessive rain and floods, particularly in Bengal and Eastern Bengal. Agricultural prospects were to a certain extent improved by the good winter rains which, though late, saved a part of the spring harvest of 1907 in northern India. But as unfavourable conditions prevailed in other parts of the country, particularly in Bengal, prices remained unaffected; and when the failure of the south-west monsoon occurred famine conditions declared themselves over a large area. The wheat and oilseeds harvests of 1908 were very poor owing to deficient and badly distributed rainfall. Neither were the autumn crops good. The rise of prices was accentuated in 1907 and 1908 by the widespread failure of the crops in northern India. The wheat crop of 1909 showed an advance on the previous year, though the winter rains were generally deficient and the untimely rain in April damaged a quantity of the grain on the threshing floor in parts where the crop was reaped early. The monsoon was exceptionally favourable, and there was a considerable increase in the total outturn of the staple crops. There was a phenomenal rice crop in Burma and the two Bengals, the extended cultivation in the latter having been stimulated by low prices of jute. As a result there was a general decline in prices in 1909. The timely and well distributed winter rains brought fine crops to harvest in the spring of 1910. The monsoon of that year was on the whole favourable and the crops good. Prices continued to fall; but in the case of rice a strong demand from China operated to keep the rates at the level of the previous year, particularly in Burma.

The spring crops of 1911 were on the whole good, though frost and rust affected them in parts of northern and western India, and prices continued to fall. The monsoon of that year, however, was not very favourable particularly in northern and western India where the autumn crops suffered more or less from drought, and prices of rice showed an upward tendency accentuated by strong export demand. The spring crops of 1912 suffered through drought in western and in parts of northern India and prices rose; and although the monsoon of that year was not on the whole unfavourable, the strong export demand maintained the prices of rice at a high level. The rise in prices continued in 1913 and the spring crops of that year were affected adversely by deficient rains in the Punjab and in the western parts of the United Provinces and in the Bombay Presidency. The monsoon on the whole was not very satisfactory. In 1914, the spring crops suffered through drought in many districts in northern and western India, chiefly in the United Provinces, Rajputana and Sind. The monsoon was on the whole favourable for the autumn crops, except in parts of northern and western India where heavy rains in September were injurious to the cotton crop. The winter rice crop was adversely affected by deficient rainfall during the months of September, October and November in Bengal, Bihar and Orissa, Burma and the United Provinces; elsewhere conditions were favourable. The spring crops of 1915 were good, except in parts of Bengal, Bihar and Orissa, and the eastern districts of the United Provinces, where the crops were affected by drought. The monsoon of 1915, however, was not very favourable. It arrived late and was weak and irregular in parts of the Bombay Presidency and of the Punjab; the rainfall in the north-eastern, central and southern India, on the other hand, was good. Excessive rain however caused serious floods in Assam and in parts of Bengal and the United Provinces.

The spring crops of 1916, except linseed, were seriously affected by the failure of winter rains, especially in the unirrigated tracts. The monsoon of 1916 was particularly good: it arrived early and continued late, the distribution being remarkably uniform. There was ample moisture for the maturing of the autumn crops, which were distinctly better than those of 1915.

The monsoon of 1917 gave abundant rainfall throughout the country, especially in north-west India. The heavy and continuous rains adversely affected the growth of some of the autumn crops, such as cotton and indigo, but provided a good seed-bed for those crops that are harvested in the spring. Some of the latter crops, especially winter oilseeds, suffered somewhat through the holding off of the winter rains.

APPENDIX D.

Statement showing the total area and export of certain principal crops in India with their seasonal conditions in each province since 1897-98.

1897-98

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Area . . (acres)	70,783,749	19,946,164	23,806,449	12,566,648	8,914,996	1,366,613
Export . . (cwt)	26,743,661	2,392,607	642,560	12,553,080	3,722,526	133,849
General conditions prevailing in India	Generally good monsoon. Area slightly in excess of average and yield largely exceeds average.	Season favourable in Northern India but not so in Central and Western India. Area below average but yield above average.	..	Excellent yield of rape, mustard and linseed specially in the Punjab.	Generally favourable in Bombay and Madras. Area slightly below but yield about average.	..
Bengal . . .	Very good season and yield in excess of a full average crop.	Favourable season and satisfactory yield.	..	Good crop, though restricted area.	Season on the whole favourable.	Decreased area. Crop damaged by absence of seasonable rain or excessive rain.
Assam . . .	Harvest was a good one owing to sufficient rainfall.	Yield poor. Crop suffered from floods caused by earthquake.
N.-W. P. and Oudh .	..	On the whole favourable season and yield up to average.	..	Good crop, though restricted area.	On the whole conditions and quality of crop good.	Unfavourable season. Crop damaged by flood.
Punjab	Favourable season and yield normal.	..	Good crop . .	Decreased area but yield above average.	Generally good crop.
Bombay	Season not very favourable for sowing, but yield fairly satisfactory.	..	Area decreased. Outturn deficient. Good rapeseed crop.	Yield materially smaller than average.	..
Central Provinces .	..	Rain insufficient for early sowings but good for late crop. Yield on the whole fair.	Milleta gave a bumper outturn.	Area decreased. Outturn deficient. Good rapeseed crop.	Season on the whole favourable; yield above average.	..
Madras . . .	Sufficiently good season, fair yield.	..	Prices of millet rose high, 40 per cent above previous years.	Outturn greatly below average.	Crop injured by blight or drought; yield below average.	Decreased area but crop fair.
Burma . . .	Uniformly favourable season. Yield above average.
Berar . . .	Rice was cheaper than in 1896-97.	Season unfavourable	Milleta gave excellent result. Prices fell satisfactorily.	Season exceptionally favourable. Area increased. Yield above average.	Cotton gave more than double the yield of previous year.	..

1898-99

Area . . (acres)	74,778,045	20,225,111	21,765,899	12,167,001	9,178,060	1,013,627
Export . . (cwt)	37,942,286	19,520,496	1,960,590	19,279,909	5,411,012	135,187
General conditions prevailing in India	Generally good except in Berar. Area larger than average. Yield 26 per cent above the average.	Generally unfavourable except in Bengal and the United Provinces where season was very favourable. Area slightly smaller but yield slightly above average.	..	Yield above average; excellent in Bengal but poor in other provinces.	Generally unfavourable except in the North-Western Provinces and Bombay. Area slightly below but yield slightly above average.	Decreased area. Yield poor owing to excessive rain and floods.
Bengal . . .	Seasonable weather though slightly damaged by floods in Bihar. Yield largest on record.	Season uniformly favourable; outturn above normal.	..	Season generally favourable.	Season unfavourable; yield three-fourths of normal.	Season favourable in North Bihar but unfavourable in Lower Bengal.
Assam . . .	Both early and late rice turned out well, the latter being a bumper crop.	Decreased area. Yield very small.
N.-W. P. and Oudh .	..	Season on the whole very favourable; outturn good.	..	Season on the whole favourable. Good linseed and rapeseed but had sesamum crop.	Season on the whole favourable; crop good.	Season not favourable.
Punjab	Conditions on the whole not favourable and yield below average.	..	Season very unfavourable for rapeseed. Poor yield of sesamum.	Season on the whole unfavourable; yield below average.	Season on the whole unfavourable.
Bombay	Season not on the whole favourable and yield below average.	..	Season on the whole unfavourable. Good yield of sesamum.	Season on the whole good. Yield abundant.	..
Central Provinces .	..	Season unfavourable and yield two-thirds of normal.	..	Season very unfavourable.	Season unfavourable. Yield below normal.	..

APPENDIX D—continued

1898-99—continued

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Madras . . .	Deficient early rains but later rain beneficial. Yield about a normal crop.	Poor sesamum crop	Season unfavourable. Decreased area and yield poor.	Season on the whole unfavourable.
Burma . . .	Crop slightly injured by failure of late rains. Yield 90 per cent of an average crop.
Bihar	Season not unfavourable at sowing time. But cessation of monsoon and the failure of winter rains damaged the crop.	Millet, the staple food, gave a good crop.	..	Cotton yielded very well.	..

1899-1900

Area . . (acres)	72,808,952	16,104,779	21,604,321	10,327,641	8,375,841	1,046,434
Export . . (cwts)	32,271,393	9,704,087	551,687	15,774,939	4,373,470	111,420
General conditions prevailing in India.	Generally bad, except in Burma where crop was exceptionally good. Area more than average but yield about the same.	Generally bad, owing to dryness of the season except in the North-Western Provinces and the Punjab. Both area and yield much below average.	..	Generally bad, except for sesamum in the Central Provinces and Bengal. Both area and yield below average.	Generally bad, specially in Bombay. Both area and yield much below average.	Generally bad. Both area and yield below average.
Bengal . . .	Season on the whole unfavourable.	On the whole season not favourable. Yield 5 per cent below normal.	..	Season unfavourable. Yield of sesamum above average.	Season unfavourable. Yield poor.	Season on the whole unfavourable. Crop also injured by flood.
Assam . . .	Outturn of early rice was not good in the Brahmaputra Valley, but late rice yielded a bumper crop.	Yield was somewhat below average.
N. W. P. and Oudh	..	Season on the whole favourable. Yield per acre highest on record.	Small millets were a full normal crop and other millets 87 per cent of average.	Season on the whole unfavourable. Yield of sesamum good.	Season unfavourable. Partial failure of crop.	Season on the whole unfavourable.
Punjab	Season on the whole favourable. Yield fair.	..	Season unfavourable. Yield poor.	Season on the whole unfavourable. Yield poor.	Crop damaged by absence of rain and stoppage of canal irrigation.
Bombay	Season very unfavourable. Failure of crop.	..	Season very unfavourable. Failure of crop.	Season very unfavourable. Yield very poor.	..
Central Provinces	Hardly any crop came into ear.	Season unfavourable. Yield poor.	The millet crop was almost everywhere lost.	Season very unfavourable. Yield poor; sesamum good.	Season very unfavourable.	..
Madras . . .	Season on the whole not favourable. Yield not good, being two-thirds of a normal crop.	Season unfavourable. Yield not good.	Season on the whole unfavourable and yield poor.	Season generally unfavourable. Yield poor.
Burma . . .	Season good. Crop quite excellent, largely exceeding average.	Season not favourable. Area decreased.	..
Bihar	Practically there was no wheat harvest.	Millets failed, giving 32 lbs. per acre against 274 lbs. in 1898-99. The stock sank from 6½ to 1¼ millions of maunds.	Yield practically nil.	Cotton 30 lbs. per acre against 178 lbs in 1899.	..

1900-01

Area . . (acres)	69,026,273	20,103,024	22,019,290	12,913,372	6,600,820	977,349
Export . . (cwts)	31,342,788	50,021	124,059	10,997,947	3,575,703	102,491
General conditions prevailing in India.	Favourable except in Bengal. Both area and yield below average.	Unfavourable owing to excessive rain and rust in Northern and Central India and to want of moisture in Western India; area below average but yield above average.	..	Generally unfavourable except for rapeseed in the Punjab and Bombay. Area and yield below average for linseed, but above average for rapeseed and sesamum.	Generally unfavourable except in the N.-W.P. and Bihar. Both area and yield below average.	Generally fair. Both area and yield below average.
Bengal . . .	Season not favourable.	Season unfavourable. Yield poor.	..	Season unfavourable. Yield below average.	On the whole season unfavourable. Yield a little below normal.	Season on the whole good in Bihar, but unfavourable in Lower Bengal. Yield below normal.

APPENDIX D—continued

1900-01—continued

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Assam . . .	Outturn of early rice was not good and late rice yielded a distinctly poor crop.	Season not favourable.
N.-W. P. and Oudh .	Rice was not a success, especially in the eastern districts. Yield 75 per cent of normal.	Season not very favourable. Yield above average.	Large millets were almost full crops.	Season not favourable for linseed and rapeseed but fair for sesamum.	Season favourable. Yield good.	Season fair. Yield below normal.
Punjab	Season not very favourable. Yield above average.	..	Season very unfavourable for rapeseed and sesamum.	Season fair; yield below normal.	Season favourable. Yield slightly below normal.
Bombay	Season on the whole unfavourable. Yield less than half the average.	..	Season generally favourable for rapeseed and sesamum, but unfavourable for linseed; the sesamum crop being 30 per cent more than average.	Season not very favourable. Yield below average.	..
Central Provinces and Berar.	Outturn generally up to average.	Season not favourable. Yield three-fourths of average.	Millets gave a fair yield everywhere.	Season generally unfavourable; linseed crop was poor.	Season unfavourable, except on rich soils in Berar where a heavy crop was obtained.	..
Madras . . .	Season not unfavourable. Crop satisfactory.	Conditions not good. Crop deficient.	Season not very favourable. Yield below normal.	Season on the whole fair. Yield below average.
Burma . . .	Conditions normal	Season not favourable. Yield three-fourths of normal.	..

1901-02

Area (acres)	70,067,328	18,006,958	21,818,880	11,907,839	10,200,769	792,179
Export (cwt)	34,028,839	7,321,818	301,655	22,965,227	5,700,014	89,760
General conditions prevailing in India.	Favourable except for the winter crop in Bengal. Both area and yield much below average.	On the whole unfavourable owing to drought. Both area and yield below average.	..	Generally unfavourable. Area and yield below average.	On the whole fair. Area about equal to average, and yield slightly below average.	Unfavourable. Both area and yield much below normal.
Bengal . . .	Season unfavourable for winter crop which was 75 per cent of normal; fair for autumn crop.	Season unfavourable. Yield much below normal.	..	Season unfavourable. Yield below normal.	Season on the whole unfavourable. Yield below normal.	Season on the whole unfavourable. Yield below normal.
Assam . . .	Outturn was fairly good in the Surma Valley, Darrang, Nowgong and Lakhimpur, moderate in Kamrup, and poor elsewhere.	Season favourable. Area increased. Yield equal to average.
United Provinces .	Crop only 65 per cent of normal.	Season unfavourable. Yield below normal.	..	Season unfavourable except for rapeseed whose yield was above average.	Season favourable. Yield above average.	Season unfavourable. Yield much below average.
Punjab	Season unfavourable. Yield much below normal.	..	Season unfavourable. Crop below average.	Season fair. Yield above average.	Season not favourable. Yield much below normal.
Bombay . . .	Rice was lost over a large area in Gujarat.	Season generally unfavourable. Yield very poor.	..	Season generally unfavourable. Yield very poor.	Season not favourable. Yield much below average.	..
Central Provinces and Berar.	..	Season unfavourable. Yield below normal.	..	Season unfavourable. Yield much below normal.	Season unfavourable except in Berar.	..
Madras . . .	Season on the whole favourable. Area about average. Yield above average.	..	*Millets generally yielded a crop below normal.	Season unfavourable. Yield below normal.	Season fair. Yield two-thirds of normal.	Season generally unfavourable. Yield much below average.
Burma . . .	Conditions favourable. Crop greatly in excess of average.	Season not favourable. Yield two-thirds of normal.	..

1902-03

Area (acres)	71,633,546	19,615,382	23,125,019	13,095,565	11,104,208	653,801
Export (cwt)	47,485,090	10,292,150	753,406	22,194,060	6,044,806	65,377
General conditions prevailing in India.	Not unfavourable. Both area and yield above average.	Season favourable, though of an abnormal character. Outturn shows great improvement, about 25 per cent more than average.	..	Season generally favourable. Area sown is 10 per cent above average, but yield is only 6 per cent more.	Noticeable feature is the extension of area but the promise of an exceptionally favourable season not fully realised. Yield is 38 per cent above average.	Season unfavourable. Both area and yield nearly half the average.

APPENDIX D—continued

1902-03—continued

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Bengal . . .	Season not unfavourable. The winter rice crop was 94 per cent and autumn 87 per cent of an average crop.	Season unfavourable. Yield little below average.	..	Season not favourable.	Season unfavourable owing to deficient rainfall.	Season unfavourable for indigo, and outturn worst on record, being 60 per cent of average.
Assam . . .	Outturn of early rice was good but late rice yielded a distinctly poor crop.	Season unfavourable. Area increased. Yield about average.
United Provinces .	Rice gave an outturn of 80 per cent of normal.	Rainfall favourable in early season but dry season later on. Yield highest on record being 97 per cent.	Milleta gave an outturn of 85 to 95 per cent of normal.	Autumn rains seasonable and subsequent dry season very favourable. Area largest on record and outturn nearly double the average.	Cultivation extended owing to a succession of seasons of light rainfall. Yield 75 per cent of normal.	Late monsoon and continuous rains in July retarded the growth of indigo plant. Yield 68 per cent below average.
Punjab	Conditions favourable at the beginning and end of season. Prolonged drought in middle injured crops on dry lands.	..	Prolonged monsoon favourable but failure of winter rains injured crop. Area and yield better than average.	Deficient rainfall contracted area and early break in the rains marred prospects.	Insufficient irrigation, unfavourable weather and contracted area. Yield 54 per cent below average.
Bombay	Season was above the average. Monsoon late and winter rains beneficial. Yield very good.	..	Season favourable. Area greatly extended and yield 88 per cent above average.	Sowing rains much later than usual but season distinctly favourable.	..
Central Provinces and Berar.	Yield only 49 per cent of normal.	Early break in monsoon contracted area but some good cold weather showers improved prospects. A bumper crop, 115 per cent of normal. In Berar the contracted area was owing to failure of late rains and yield about 70 to 75 per cent of normal.	Jawar gave normal yield. In Berar exception ally good showers raised the yield up to average.	Favourable conditions. Average crop. In Berar reduced area was attributed to failure of late rains and yield was reduced by wet during harvest, being 61 per cent of a normal crop.	Sowings successful on a large area. Heavy rains damaged crop later. But season was about the average. Yield 91 per cent of normal. In Berar both area and outturn much in excess of average, though monsoon was late and late rains heavy.	..
Madras . . .	Increased area owing to favourable season. Crop generally good, something like 86 per cent of a normal crop.	Seasonable rainfall, crop fair, and outturn 72 per cent of normal.	Good and timely rainfall stimulated sowings.	Cultivation declined owing to low prices. Yield 85 per cent of normal produce.
Burma . . .	Season not quite favourable. Yield 94 per cent of a normal crop.	Outturn was good, 93 per cent of normal.	..

1903-04

Area (acres)	69,596,654	23,612,730	21,048,067	14,545,960	11,895,597	712,049
Export (cwts)	45,001,751	25,911,312	2,050,780	24,681,424	7,931,075	60,410
General conditions prevailing in India.	On the whole fair. Both area and yield about equal to average.	Season exceptionally favourable. Good crop of last year exceeded by 20 per cent both in area and yield.	..	Generally favourable and exceptionally good for sesamum.	Opening season favourable but prospects deteriorated by late and heavy rains. Area is 27 and yield 46 per cent more than average.	Generally favourable
Bengal . . .	Deficient rainfall in early part of season affected area. The winter rice crop 90 per cent and autumn rice 80 per cent of normal.	Season generally favourable. Crop 90 per cent of normal.	..	Season favourable	Defective rainfall; at the outset favourable but late rains excessive and production low.	Conditions favourable with good late rains. Yield 65 per cent of normal.
Assam . . .	Rainfall very favourable to the winter rice crop which yielded a bumper outturn.	Scantiness of winter rains occasioned a short outturn of mustard.	Crop suffered from drought in March and April; the weather afterwards proved generally favourable.	..
United Provinces .	Rice yielded 80 per cent of normal.	Heavy rain at close of the monsoon. But season remarkably favourable. Yield 75 to 80 per cent of normal.	Milleta yielded 80 per cent of normal.	Extended sowing, owing to excessive moisture, and light rain benefited crops.	Late arrival of monsoon restricted area and late excessive rain damaged crop.	Late arrival of monsoon injured crop. Yield was satisfactory in the Doab.
Punjab	Season favourable. Area largest on record. Yield 55 per cent above average—a bumper crop.	..	Favourable conditions at sowing time but failure of winter rains seriously affected crop in the south. Elsewhere a bumper crop.	Late spring rains favourable but late excessive rain affected the yield which was still above normal.	Timely irrigation and seasonable rainfall benefited crop.
Bombay	Favourable rains at sowing time. Season fairly good.	..	Linseed crop fairly good. Deficient late rains affected area and yield of rapeseed.	Favourable rains extended sowing and crop sated well giving satisfactory yield.	..

APPENDIX D—continued

1903-04—continued

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Central Provinces and Berar.	The rice tracts reaped a splendid harvest owing to heavy rainfall.	Absence of winter rains affected crop which was still 96 per cent of normal.	Crop was a failure	Sowings though late were successful over large area; but absence of winter rains told seriously upon the crop.	Heavy and continuous rainfall retarded sowing and damaged crop. Yield 88 per cent of a full crop. In Berar favourable season and good prices encouraged sowings but heavy rain caused damage. Yield 63 per cent of normal.	...
Madras . . .	Good and timely rainfall. Crop fair, 87 per cent of normal.	Rainfall reasonable. Condition of crop fair.	Extended area owing to good and timely rainfall. Crop good, 85 per cent of normal.	Timely rainfall improved cultivation.
Burma . . .	Prospects very favourable and quality of grain excellent. Yield largest on record, 91 per cent of normal.	Early rains scanty and late rains excessive. Yield 88 per cent of normal.	..

1904-05

Area . (acres)	73,525,388	23,509,802	23,080,900	13,518,708	13,017,092	510,289
Export . (cwt.)	49,186,372	43,000,502	2,526,544	26,873,744	5,657,743	49,252
General conditions prevailing in India.	Not very favourable. Both area and yield about equal to average.	Unfavourable owing to severe frost, but both area and yield above average.	..	Unfavourable owing to frost followed by cloudy weather.	Generally favourable except in Bombay and Madras. Both area and yield above average.	Unfavourable. Both area and yield below average. Outturn 46 per cent only.
Bengal . . .	Rainfall unseasonable. Heavy rain in Bihar and flood in Eastern Bengal. Yield 80 to 86 per cent of normal.	Season unfavourable.	..	Season unfavourable. Crop damaged by hail, frost and excessive rain.	Season unfavourable.	Excessive rain damaged crop in Bihar. Outturn 56 per cent of normal.
Assam . . .	The various rice crops yielded good outturns in many places—well above normal.	Season not unfavourable. Area decreased. Crop fair.	Season generally favourable. Yield better than preceding year.	..
United Provinces	Early conditions promising but later season disastrous owing to frost and rust. Yield 70 per cent of normal.	Millets gave outturns varying between 80 to 85 per cent of normal.	Conditions promising but crop suffered from frost and insects.	Favourable monsoon at sowing time.	Sowings greatly contracted and excessive rain damaged crop.
Punjab	Condition of rainfall ideal, though severe frost injured crop, yield was more than 116 per cent.	..	Season favourable, but severe frost was disastrous to the crop.	Sufficient rainfall extended cultivation. Yield up to average or above it. An exceptional crop.	Insufficient canal irrigation interfered with sowings.
Bombay	Insufficient sowing rains. Severe frost injured crop.	..	The crop suffered from cold and frost in Gujarat and deficient moisture in the Deccan.	Shortness of early sowing rains contracted area. Crop suffered from deficient moisture and excessive cold.	..
Central Provinces and Berar.	The rice crop of Chhattisgarh including 71 per cent of rice area gave little short of an average yield.	Rainfall favourable but spring crop injured by frost in northern districts. Crop yielded well elsewhere.	..	Unusually inclement season, frost, cloudy weather and hail-storms damaged crops seriously.	Sowing season favourable to cultivation of the southern districts. Cotton area extended.	..
Madras . . .	Restricted area owing to failure of rains. Crop suffered from want of moisture. Yield 75 per cent of normal.	Area decreased for want of timely and sufficient rainfall. Crop generally fair.	Timely rainfall for sowings but crop suffered for want of later rains.	Scanty rains and fall in prices greatly reduced area under indigo.
Burma . . .	Sowing rains seasonable and area extended, crop suffered in places from floods and high winds. Outturn 93 per cent of normal.	Late heavy rains damaged crop.	..

1905-06

Area (acres)	73,400,528	22,402,307	20,742,047	12,501,253	13,099,859	401,138
Export . (cwt.)	43,040,614	18,750,467	1,670,670	17,575,886	7,399,534	31,186
General conditions prevailing in India.	Generally fair except in Eastern Bengal. Both area and yield about average.	Season generally favourable and yield 13 per cent in excess of the preceding year.	..	Conditions unfavourable.	Season unfavourable.	The character of the rainfall at one time deficient, and at another in great excess, contributed to bad result.

APPENDIX D—continued

1905-06—continued

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Bengal	Rainfall ill-distributed. Heavy rains and floods damaged crops in Eastern Bengal and Bihar. Winter rice 85 per cent of average crop.	Continuous late rains and hailstorms caused damage.	..	The crop suffered from want of moisture and untimely rains. Yield good.	Season favourable for early crops but late crops damaged by excessive rains and floods.	Season unfavourable. Excessive rains damaged crops. Yield 35 per cent of normal.
Eastern Bengal and Assam	The late rice crops suffered in Eastern Bengal from floods. Harvest bad.	Ill-distributed rainfall.	..	Conditions on the whole not favourable.	Crop was injured by excessive rain.	..
United Provinces	Early rice yielded 80 per cent of normal.	Restricted area owing to drought. Irrigated crop did well; yield 85 per cent.	Millet yielded from 65 to 75 per cent.	Insufficient moisture and absence of early winter rains affected crops.	Conditions favourable at sowing time. Dry crop failed.	Hot winds and want of rains affected crops in the Doab.
Punjab	..	Condition most favourable. A bumper crop.	..	Sowing season favourable. Prolonged drought checked progress but late rains improved prospects.	Season disastrous to the crop; -greenfly, severe drought and ravages of boll-worms.	Timely canal supply stimulated sowings.
Bombay	..	Deficiency in late rains, restricted area. Season favourable in Sind.	..	Deficient late rains restricted area and linseed crop suffered from want of moisture. The rapeseed crop was good.	Early sowing rains favourable but late rains scanty. Crop yielded badly, being injured by boll-worms.	..
Central Provinces and Berar.	The rice crop was seriously deficient.	Heavy rains in September encouraged sowings. Harvest not much below normal.	Jawar did badly in Berar and Wardha. Outturn only a little over 60 per cent of normal.	Sowing season favourable but early cessation of monsoon restricted area and crop damaged by frost and absence of seasonable rains.	Season favourable though late, but prospects affected by ill-distributed rains; yield below average.	..
Madras	Rainfall timely. Crop fair to good.	Rainfall seasonable. Condition of crop fair to good.	Crop suffered from want of rains.	Area contracted for want of timely rains.
Burma	Considerable area destroyed by floods but conditions satisfactory.	Season favourable and crop good.	..

1906-07

Area	(acres)	73,541,113	25,137,416	20,781,623	13,965,365	13,771,268	448,594
Export	(cwt)	38,700,105	10,028,014	780,182	19,735,690	7,400,839	35,102
General conditions prevailing in India.	Generally fair except in Western Bengal. Both area and yield below average.	Outturn 11 per cent greater than average.	..	Season fairly satisfactory, though sowing season unfavourable. Outturn good.	Season generally favourable, but crop suffered from disease and insects. Yield fair.
Bengal	Sowings late owing to dry season. Disastrous floods in Bihar.	Season unfavourable. Cloudy weather, rain, and hail affected crop.	..	Season not very favourable.	Season favourable for early crops but late crops suffered from excessive rains and floods.	Sowings retarded for want of rain. The crops suffered later from floods.	..
Eastern Bengal and Assam.	Season favourable for winter rice.	Outturn of mustard 83 per cent and of linseed 78 per cent of normal.
United Provinces	..	Crop promised well till February but later season very unfavourable. Cloudy weather and rust.	..	Insufficient moisture and late arrival of winter rains interfered with the sowings but the crop good in Bundelkhand.	Season very favourable and yield better than in several years past.	Season favourable, though crop suffered at places from hot winds.	..
Punjab	..	Early promise of crop excellent, but excessive rains, hailstorms, and hot winds damaged crop.	..	Opportune autumn rains and satisfactory winter falls but excessive late rains damaged unirrigated crops.	Reduced area sown. Early season threatened with boll-worms but conditions favourable later.	Conditions normal.	..
Bombay	..	Crop fared well at first, but cloudy weather and rains induced rust and injured crop.	..	The crop suffered from want of moisture in the Deccan.	Early rains favourable. Crop suffered from want of rains in the Deccan.
Central Provinces and Berar.	..	Season favourable, and yield good.	..	Conditions favourable but the crops damaged by heavy rains. Outturn above normal.	Season generally favourable in northern districts but elsewhere crop suffered from excessive rains and floods.
Madras	Rainfall seasonable and crop fair to good.	Conditions fair to good. Seasonable rainfall.	Rainfall was seasonable at sowing time.	Seasonable rainfall and rise in prices induced extended cultivation.	..
Burma	Rains late and below average. Late rains beneficial. Yield 95 per cent of normal.	Season fairly favourable.

APPENDIX D—continued

1907-08

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Area (acres)	75,980,682	18,424,191	21,063,751	12,485,973	13,909,269	405,005
Export (cwts)	38,253,323	17,009,183	1,125,993	23,184,859	4,562,024	32,490
General conditions prevailing in India.	Season generally favourable except in Bengal.	Season unfavourable. Outturn 25 per cent below average.	..	Conditions unfavourable.	Season very unfavourable owing to shortage and bad distribution of rains.	Lack of timely rains affected the crop except in Bihar.
Bengal . . .	Rainfall unseasonable and ill-distributed. Heavy floods in Orissa, Chota Nagpur, South Bihar and South-West Bengal.	Crop suffered from continued drought.	..	Season unfavourable. Yield below normal.	Crop suffered from floods in August and later from drought.	Crop was injured by drought except in Bihar.
Eastern Bengal and Assam.	Season favourable generally.	Unusual and extreme drought affected the crop from the beginning.	..	Monsoon closed early. Winter and spring months were unusually dry. Yield of mustard 74 per cent and of linseed 87 per cent of normal.	Conditions very favourable.	..
United Provinces .	..	Crop fared well at first, but later strong westerly winds greatly damaged the crop which was sown late or in sufficiently irrigated.	..	Prolonged drought severely affected the crops. Outturn of both linseed and rapeseed 50 per cent and of sesamum (oil) 25 per cent of normal.	Rain was favourable till August when it stopped and dry west winds began to blow and dried up the crop in most places. Yield poor.	Affected by drought in the eastern districts.
Punjab	Climatic conditions most unsatisfactory.	..	Seasonal conditions unfavourable throughout.	Conditions not favourable. Injury by rats and insects.	Season unfavourable throughout.
Bombay	Late rains deficient and yield below average.	..	Crops suffered from want of moisture and failed in places. Damage by frost, disease and insects.	Early sowing rains deficient in places. Crop fair.	..
Central Provinces and Berar	..	Restricted area owing to the sudden cessation of monsoon. Yield below normal.	..	Inadequacy of moisture, cloudy weather, frost, insects, and absence of dew caused considerable damage.	Season not favourable. Yield much below normal.	..
Madras . . .	Crop fair to good	Crops generally in fair to good condition.	Rainfall seasonable. Crop generally fair.	Area contracted owing to want of seasonable rainfall.
Burma . . .	Outturn 90 per cent of normal.	Deficient rainfall. Crop poor.	..

1908-09

Area (acres)	72,800,536	21,198,764	24,780,144	14,105,598	12,958,974	286,354
Export (cwts)	30,251,470	2,195,145	459,480	16,242,695	6,798,411	24,946
General conditions prevailing in India.	Season not very favourable on the whole.	Season not very favourable owing to want of moisture during the period of growth.	..	Seasonal conditions fairly favourable on the whole except in Bengal and Eastern Bengal and Assam.	Season relatively satisfactory.	Moisture deficient everywhere except in United Provinces, where season was in the main favourable.
Bengal . . .	Rain deficient in Bihar. In Lower Bengal, Orissa and Chota Nagpur heavy rain and insect pests somewhat damaged the crop. Winter rice 72 per cent of the normal.	Crop suffered from deficiency of moisture.	..	Season very unfavourable for spring oilseeds and not very favourable for sesamum.	Season was generally favourable for the early crop but less favourable for the late crop.	Moisture deficient at first, but conditions better afterwards.
Eastern Bengal and Assam.	Season favourable on the whole.	From the beginning the crop was affected by severe drought.	..	Long-continued drought affected spring oilseeds.	Season at first favourable but crop later on suffered through excessive rain in places.	..
United Provinces .	..	Moisture was insufficient in many places. Winter rains were not sufficient. Heavy rainfall in April and strong winds caused some damage.	..	Season fairly favourable. Outturn of linseed 75 per cent and of rapeseed and sesamum 80 per cent of normal.	Season fairly favourable.	Area decreased owing to insufficient water supply. Except in places where the crop suffered from excessive late rains the season was favourable.
Punjab	Excessive rain at sowing time and at harvest time but too little during the period of growth.	..	Conditions fairly favourable though rainfall excessive in many districts.	Outturn low on account of the superabundance of monsoon rainfall and flood.	Late flowing of the underground canals (reduced area).
Bombay	Rain at sowing deficient. Frost damaged crop in places.	..	Condition of rapeseed and sesamum fair. Linseed suffered from absence of moisture and want of sufficient cold and dew.	Sowing rains deficient. Adverse easterly winds, cold and frost affected the crop.	..

APPENDIX D—continued

1908-09—continued

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Central Provinces and Berar.	..	Conditions at sowing time favourable. Winter rains fairly well distributed; but crop somewhat affected by frost, cloudy weather and hail.	..	Seasonal conditions fairly favourable.	Favourable, though heavy and continuous rainfall in July and August; restricted area.	..
Madras . . .	Water-supply insufficient, but condition of crop fair to good.	Condition of crop fair.	Area decreased for want of timely and sufficient rainfall. Condition of crop fair to good.	Area restricted owing to want of timely rain. Outturn 68 per cent of the normal.
Burma . . .	Season good. Crop 98 per cent of normal.	Season latterly favourable. Crop fair.	..

1909-10

Area (acres)	78,730,642	22,769,918	21,801,934	14,625,057	13,172,188	295,706
Export (cwt)	39,205,013	21,011,484	826,349	27,146,684	8,968,042	18,081
General conditions prevailing in India.	Season generally favourable.	The general seasonal conditions were favourable on the whole.	..	Season favourable on the whole.	Season fairly satisfactory in the principal cotton growing tracts.	Season fairly favourable everywhere except in Bengal.
Bengal . . .	Season favourable. Outturn of autumn rice normal; of winter rice 110 per cent of normal.	Rainfall defective. Outturn 87 per cent of normal.	..	Season unfavourable for early sesamum but favourable for the late variety and spring oilseeds.	Season favourable for early cotton; late crop suffered from excessive rain in places.	Deficient winter rain affected sowing and heavy rains in August reduced outturn.
Eastern Bengal and Assam.	Season favourable. Outturn of autumn rice normal and winter rice 110 per cent of normal.	Winter rain deficient. Crop average.	..	Conditions generally fair.	Season fairly good at first, but latterly very unfavourable.	..
United Provinces .	..	The rainfall was timely and beneficial. Hail and strong winds caused slight damage.	..	Season generally favourable. Outturn of sesamum 80 per cent, of linseed 95 per cent and of rape seed 80 per cent of the normal.	The rainy season was generally favourable, but scanty rain of September followed by high winds reduced outturn in places.	Season favourable in western and southern districts, but in the eastern districts crop was damaged by floods and insects.
Punjab	Conditions extremely favourable.	..	Condition of sesamum from good to average, of spring oilseeds very favourable.	Excessive rain at the end of August and early in September damaged the crop in places. Outturn per acre satisfactory on the whole.	Season favourable.
Bombay	Crop suffered from deficiency of moisture and water-supply. Frost, rust and rats damaged crop in places.	..	Uncertainty of late rains and deficient water-supply restricted area under spring oilseeds and incessant rain at sowing time restricted area under sesamum.	Season favourable for early crop; the late crop suffered in places from deficient rains and adverse winds.	..
Central Provinces and Berar.	..	Conditions generally good in the important wheat growing tracts.	..	Conditions good for sesamum and generally favourable for linseed.	Rainfall timely and beneficial and the season was favourable.	..
Madras . . .	In some districts crop suffered due to the failure of the north-east monsoon. Conditions otherwise generally fair.	Crop generally fair but affected in places by the failure of the north-east monsoon.	Crop generally fair, though it suffered for want of rain in some places.	Area increased owing to timely rains. Crop fair to good.
Burma . . .	Conditions generally favourable. Yield 92 per cent of normal.	Rainfall untimely. Early crop suffered from excessive moisture. Crop not satisfactory.	..

1910-11

Area (acres)	78,524,841	24,397,699	21,184,104	14,534,230	14,447,690	282,757
Export (cwt)	47,996,731	25,323,017	519,054	30,983,246	8,686,400	16,939
General conditions prevailing in India.	Season fairly favourable on the whole.	Seasonal conditions favourable on the whole.	..	Season good for linseed, fairly favourable for sesamum, but not very favourable for rape and mustard.	Season was fairly good, but crop latterly suffered from heavy rain, cold and frost.	Season favourable except in Bengal and the United Provinces.
Bengal	Season very favourable for winter rice, yield of winter rice 112 per cent and of autumn rice 90 per cent of normal per acre.	Season favourable. Crop damaged by hail in certain places.	..	Conditions generally favourable for oilseeds; spring oilseeds suffered to some extent from hail and want of moisture in places.	Season favourable for early crop; late cotton was somewhat damaged in places by excessive rain and floods.	Excessive rain and floods caused considerable damage to crop.

APPENDIX D—continued

1910-11—continued

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Eastern Bengal and Assam.	Crop suffered from floods and insect pests. Outturn below normal.	Season commenced very favourably; but latterly the crop suffered seriously from scantiness of rain-fall.	..	Crop affected by heavy rain, drought, and insect pests.	Season favourable on the whole.	..
United Provinces	..	Season was very favourable till January; crop was afterwards damaged to a certain extent by rust and strong winds.	..	Drought in the beginning restricted area under sesamum; outturn of sesamum 80 per cent, of linseed 100 per cent and of rape seed 90 per cent of normal.	The season was generally favourable at first, but excessive rain in October seriously damaged crop and reduced outturn.	Excessive rain and floods caused considerable damage to crop. Outturn 75 per cent of normal.
Punjab	..	Conditions of crop good, though some damage was done to it latterly by rust.	..	Conditions generally favourable for sesamum. Spring oilseed was damaged considerably by cold and rain in several tracts.	Crop suffered badly from heavy rain and intense cold.	Season favourable. Condition of crop average.
Bombay	..	Crop injured in places by severe cold, frost and rust.	..	Unfavourable weather conditions at sowing time restricted area under sesamum; spring oilseeds fared well on the whole.	Season favourable at the beginning, but latterly the crop suffered more or less severely from intense cold and frost.	..
Central Provinces and Berar.	..	Conditions good in the important wheat growing districts.	..	Seasonal conditions were favourable on the whole.	Season was not a good one on the whole.	..
Madras	Season generally favourable.	Want of timely rains restricted area. Crop damaged by heavy rain in parts.	Rainfall timely and sufficient. Crop fair to good.	Season favourable. Crop fair to good.
Burma	Conditions fair. Yield 90 per cent of normal.	Season was not favourable and the outturn was poor.	..

1911-12

Area . . (acres)	76,636,887	23,025,286	18,386,332	16,494,865	14,568,189	274,476
Export . . (cwt)	52,477,427	27,223,324	446,158	29,376,007	7,328,523	19,155
General conditions prevailing in India.	Season fairly favourable on the whole.	Except in Bombay season was fairly favourable.	..	Season not favourable for sesamum except in Central Provinces and Madras but fairly favourable for spring oilseeds except in Bombay.	Season was fairly favourable except in Bombay and parts of Northern India, where the crop was seriously affected by drought.	Season was fairly favourable except in Upper India.
Bengal	Weather conditions fairly favourable. Outturn of autumn rice 90 per cent and of winter rice 100 per cent of normal.	Season was favourable though some damage was caused by insufficient late rains, strong wind and insect pests.	..	Weather conditions generally favourable for spring oilseeds. Sesamum suffered from excessive rain in places.	Season favourable both for early and late crops.	Season fairly favourable on the whole.
Eastern Bengal and Assam.	Season very favourable.	Season favourable on the whole.	..	Sesamum suffered from heavy rains and insufficient moisture. Spring oilseeds suffered from unusual prolongation of rains.	Crop seriously damaged by heavy rains and rats.	..
United Provinces	..	Season very favourable.	..	Season not favourable for sesamum but fairly favourable for spring oilseeds.	Season not favourable.	Crop suffered severely from hot winds and drought.
Punjab	..	Crop suffered from drought and thunder storm latterly.	..	Deficiency of early rains seriously affected sesamum. Drought and high winds damaged certain spring oilseeds to some extent.	Season not favourable.	Season was generally unfavourable owing to deficient water-supply.
Bombay	..	Crop suffered seriously from deficient moisture everywhere.	..	Season not favourable.	Crop suffered seriously from drought and excessive heat.	..
Central Provinces and Berar.	..	Seasonal conditions were generally favourable.	..	Climatic conditions favourable on the whole though crop affected by excessive rain latterly.	Weather conditions were generally favourable, though some damage was caused by late rains.	..
Madras	Want of timely rains restricted area.	Season favourable. Crop fair to good.	Rainfall timely and crop fair to good.	Rainfall timely and crop fair to good.
Burma	Crop slightly damaged by untimely rain.	Crops affected by drought in certain places and by heavy rain in others.	..

APPENDIX D—continued

1912-13

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Area . . (acres)	74,752,493	23,861,185	20,967,750	14,935,780	14,138,497	227,046
Export . . (cwts)	55,263,247	33,208,742	637,829(a)	23,824,431	7,377,512	11,857
General conditions prevailing in India.	Season fairly favourable on the whole.	Seasonal conditions were not very favourable on the whole.	..	Season not quite favourable on the whole.	Season favourable except in parts of the Bombay Presidency.	Except in Bihar and Orissa the season was fair to good.
Assam . . .	Season very favourable.	Conditions favourable for sesamum. Spring oilseeds suffered considerably from drought.	Crop damaged by heavy rain and rats in places.	..
Bengal . . .	Season generally favourable for winter rice. Autumn rice suffered from floods, insects and rats in places.	Season not quite favourable.	..	Season not uniformly favourable for spring oilseeds. Sesamum suffered from unequal distribution of rain, floods and cyclonic weather.	Season not uniformly favourable. Crop somewhat damaged by rats and heavy rain.	Weather conditions fair.
Bihar and Orissa .	Season not favourable.	Crop slightly damaged by heavy rains in places.	..	Conditions unfavourable for spring oilseeds. Sesamum suffered from short rainfall towards latter part of season.	Weather conditions generally favourable.	Crop suffered from disease and insufficient rainfall towards latter part of season.
United Provinces .	Winter crop suffered seriously from want of rain towards latter part of season.	Season very favourable till January; thereafter crop suffered from hail and heavy storms.	..	Drought restricted area under spring oilseeds. Sesamum suffered in places from excessive rain at the beginning and afterwards from want of rain.	Season favourable on the whole.	Season favourable.
Punjab	Crop suffered from drought, hail storm and high winds.	..	Season not favourable for unirrigated spring oilseeds. Sesamum suffered in places from early withdrawal of monsoon.	Weather conditions favourable.	Season favourable.
Bombay	Crop suffered from deficiency of moisture in latter part of season.	..	Season not favourable for sesamum. Linseed suffered from deficiency of late rains and insects. Rapeseed fared well on the whole.	Crop suffered from want of moisture in parts.	..
Central Provinces and Berar.	..	Weather generally favourable though the crop suffered from rains and hail in places.	..	Conditions fair to good for sesamum. Linseed suffered from frost, rust, cloudy weather and hailstorms.	Weather conditions generally favourable.	..
Madras . . .	Crop damaged by floods in places.	Crops fair to good ..	Season favourable ..	Condition fair.
Burma . . .	Season favourable	Weather conditions favourable.	..

1913-14

Area . . (acres)	76,907,895	22,685,024	21,405,397	14,658,027	15,844,363	169,221
Export . . (cwt)	49,006,980	24,044,105	1,685,884(a)	30,854,056	10,626,312	10,039
General conditions prevailing in India.	Season fair on the whole.	Season fair to good, except in central and western tracts where the crop suffered much from drought.	..	Conditions fairly favourable for rape and mustard and sesamum, but not favourable for linseed.	Season favourable except in parts of the Central Provinces, the Bombay Presidency, and the United Provinces.	Season not favourable on the whole.
Assam . . .	Conditions not favourable.	Season favourable .	Season not uniformly favourable.	..
Bengal . . .	Weather not very unfavourable.	Season fair .	..	Season fair for linseed, rape and mustard. Sesamum suffered from excessive rain and floods.	Season unfavourable	Weather conditions fair.
Bihar and Orissa .	Season favourable for winter rice except in parts. Autumn rice suffered from excessive rain and floods as well as short rainfall.	Weather favourable	..	Weather generally favourable.	Weather conditions generally favourable.	Crop suffered from excessive rain.
United Provinces .	Crop suffered through deficient rainfall in most places.	Crop suffered from drought in places.	..	Crops severely damaged by drought except in the eastern districts.	Crop suffered severely from drought.	Crop suffered from excessive rain in the eastern districts and from drought in the western districts.

(a) The figures of exports under Jawar include those of Bajra also

APPENDIX D—continued

1913-14—continued

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Punjab	Season very favourable.	..	Season fairly favourable for rape and mustard and linseed. Sesamum suffered from deficient rainfall.	Season favourable .	Crop suffered from drought.
Bombay	Crop suffered from deficiency of moisture in certain places.	Crop suffered in places from deficient moisture, rats and insects.	..	Season favourable for rape and mustard, not quite favourable for sesamum and not favourable for linseed.	Crop suffered from want of moisture in parts.	Crop fared well.
Central Provinces and Berar.	..	Crop suffered severely from white ants and deficient moisture in places.	..	Conditions generally favourable for sesamum. Linseed suffered severely from drought, insects, hailstorms, and cloudy weather.	Crop suffered from drought in places.	..
Madras	Season not uniformly favourable.	Weather favourable .	Season favourable .	Condition fair.
Burma	Season favourable on the whole.	Conditions generally favourable.	..

1914-15

Area . . . (acres)	77,668,882	25,451,330	21,223,308	15,333,501	15,221,787	145,792
Export . . . (cwts)	31,237,568	14,127,655	2,104,125(a)	18,432,155	10,840,045	17,142
General conditions prevailing in India.	Season fair on the whole.	Conditions favourable except in Bihar and Orissa and Bengal. Rain and hail caused some damage to the crop.	..	Conditions not quite favourable for sesamum and for winter oilseeds fair to good except in Bengal, Bihar and Orissa and parts of the United Provinces.	Conditions generally favourable except in the Punjab, the United Provinces and in parts of Bombay where crop was affected adversely by heavy rain.	Season favourable except in Bihar and Orissa and parts of the United Provinces.
Assam	Conditions fairly favourable.	Season not favourable.	Conditions fair.	..
Bengal	Crop adversely affected by deficient rainfall.	Season unfavourable	..	Season on the whole unfavourable.	Conditions favourable.	Conditions favourable.
Bihar and Orissa . . .	Season not favourable on the whole.	Crop affected by deficient rain, insect pests and hailstorms.	..	Season not favourable for winter oilseeds. Sesamum suffered considerably from short rainfall.	Season generally favourable.	Season not favourable.
United Provinces . . .	Conditions favourable except in the eastern and south-eastern districts.	Conditions fairly favourable. Heavy rain and cloudy weather affected the crop.	..	Crops suffered much from drought in the eastern districts.	Crop damaged by high wind and heavy rain.	Crop suffered from excessive rain in the east.
Punjab	Conditions favourable.	..	Season generally favourable, some damage was caused by rain, hail and frost in places.	Excessive rain, hail and cold affected the crop.	Season favourable.
Bombay	Season favourable on the whole.	Crop suffered in places from cloudy weather, rain and rats.	..	Conditions generally fair for winter oilseeds. Sesamum affected in places by heavy rains and high winds.	Crop affected in places by cold winds, cloudy weather and rain.	Condition fairly good.
Central Provinces and Berar	Conditions favourable on the whole.	Conditions favourable. Cloudy weather and hail caused some damage to the crop.	..	Season generally favourable for sesamum. Linseed affected by want of rain, hail, rust and insect.	Season generally favourable.	..
Madras	Conditions good; floods did some damage.	Season favourable .	Crop suffered from drought in places	Season favourable
Burma	Shortage of closing rains affected the crop.	Season fair	..

1915-16

Area . . . (acres)	78,670,425	23,871,366	23,050,921	14,235,589	11,435,185	351,265

1915-16—continued

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Assam . . .	Crop damaged by floods and insect pests in parts.	Crop affected by drought.	Season not favourable.	..
Bengal . . .	Season fairly favourable on the whole.	Season not altogether favourable.	..	Season not very favourable for winter oilseeds. Sesamum affected by heavy rainfall.	Crop suffered in places from drought and excessive rain	Season favourable.
Bihar and Orissa .	Season generally favourable for winter rice. Autumn rice suffered from floods in places.	Conditions generally favourable.	..	Conditions generally favourable for sesamum and winter oilseeds except in a few places.	Conditions fair to good.	Season not favourable on the whole.
United Provinces .	Season favourable on the whole.	Dry weather and strong winds affected the crop in the western districts.	..	Conditions fairly good for linseed and sesamum. Rapeseed suffered from drought and insect pests.	Season not favourable.	Season not unfavourable. Crop damaged by insects in places.
Punjab	The failure of the winter rains affected the crop very adversely.	..	Conditions not favourable on the whole.	Monsoon rain insufficient and crop suffered much from drought.	Season not favourable on the whole.
Bombay . . .	Crop adversely affected by deficient rainfall.	Cloudy weather, adverse winds, want of moisture, and deficient water supply affected the crop.	..	Season not favourable for rapeseed and sesamum, and favourable for linseed.	Crop suffered in places from absence of rain.	Crop suffered somewhat from deficiency of water supply.
Central Provinces and Berar .	Conditions favourable.	Season generally favourable.	..	Conditions favourable	Crop somewhat damaged in places by late rains.	..
Madras . . .	Season generally good.	Season favourable .	Season favourable except in a few places.	Season favourable except in the Circars.
Burma . . .	Season favourable. Storm caused some damage to the crops.	Season unfavourable.	..

1916-17

Area (acres) .	81,010,625	25,047,183	21,893,158	14,641,562	13,835,856	1,764,918
Export (cwts) .	32,795,737	14,978,272	726,031 (a)	18,241,813	8,912,302	34,230
General conditions prevailing in India.	Season favourable on the whole, except in Assam, Bombay, and the Central Provinces, and for the autumn crop in Bengal and Bihar and Orissa owing to heavy rain and floods.	Conditions good except in parts of the unirrigated areas in the Punjab and Delhi owing to insufficient rainfall.	..	Conditions favourable for linseed except in Bengal and for rape and mustard except in Assam. Conditions for sesamum generally unfavourable.	Season not favourable owing to heavy and continuous rains in September and October, particularly in the Central Provinces, the United Provinces, Bombay and Bengal.	Season not favourable except in the Punjab, Bombay and Sind.
Assam .	Crop damaged by unfavourable weather and heavy floods.	Crop affected by drought.	Season favourable .	..
Bengal .	Autumn crop damaged by heavy rainfall, sudden rise of rivers and cyclonic storm. Winter crop good.	Season not favourable.	..	Conditions unfavourable owing to excessive rainfall.	Condition of early crop unsatisfactory owing to excessive rainfall and floods. Late cotton generally fair.	..
Bihar and Orissa .	Excessive rain and floods damaged the autumn crop. Winter crop good.	Conditions very satisfactory.	..	Conditions favourable. Excessive rainfall and floods damaged sesamum slightly.	Conditions generally favourable.	The crop was somewhat damaged by drought in May and June.
United Provinces .	Season favourable except in areas affected by floods.	Conditions generally favourable.	..	Condition of linseed crop good. Rapeseed suffered from insect pests and sesamum was damaged severely by heavy showers.	Crop suffered from heavy and continuous rains and season on the whole unfavourable.	Crop was damaged by heavy rainfall and floods.
Punjab	Unirrigated crop suffered from insufficient winter rainfall. Irrigated crop good.	..	Condition of sesamum good. The unirrigated winter oilseeds suffered from the absence of winter rains.	Condition of crop favourable.	Season favourable.
Bombay . . .	Heavy and continuous rains at the end of October and in the beginning of November damaged the crop.	Season favourable in Bombay. Rain and hailstorms caused some damage in Sind.	..	Season generally favourable for winter oilseeds. Excessive rain damaged the sesamum crop in Bombay.	Conditions not favourable on the whole.	Season favourable.
Central Provinces and Berar .	Excessive rain damaged the crop in a few districts.	Conditions favourable	..	Heavy and continuous rain damaged the sesamum crop.	Season on the whole unfavourable.	..

	Rice	Wheat	Jawar	Oilseeds	Cotton	Other crop (Indigo)
Madras	Season favourable	Excessive rain adversely affected the crop.	Unseasonable rain in the "Northern" and "Western" tracts caused great damage to the crop.	Heavy rains seriously damaged the crop in certain parts.
Burma	Conditions favourable.	Season generally favourable.	..

1917-18

Area . (acres)*	79,450,000	26,270,000	..	11,213,000	15,342,000	703,000
Export . (cwts.)	39,293,472	29,087,492	306,449 (a)	9,033,254	7,308,105	31,062
General conditions prevailing in India.	Season favourable on the whole except in parts of Bombay and Sind.	Crop affected by the failure of winter rains, especially in the central and eastern India.	..	Absence of winter rains adversely affected the growth of linseed, rape and mustard in the important oilseeds-growing provinces. For sesamum season was not favourable.	Crop seriously affected by the heavy and continuous rain of September and October, except in Madras, Sind, North-West Frontier, Assam, Mysore and Baroda.	Season not altogether favourable.
Assam	Season favourable	Conditions latterly unfavourable for want of rains.	Season favourable .	..
Bengal	Season generally favourable, although crop was affected by excessive rain and floods in parts.	Season unsatisfactory.	..	Season unfavourable.	Conditions were generally unfavourable owing to excessive rainfall in June, July and October.	Crop damaged to some extent by floods.
Bihar and Orissa .	Conditions favourable. Some damage was caused to the crop by excessive rain in places.	Crop suffered to some extent from absence of winter rains.	..	Conditions generally favourable. Excessive rain damaged the sesamum crop in the important districts.	Season generally favourable, although crop was somewhat damaged in places by rain and floods.	Crop affected by unfavourable weather and floods during the manufacturing season.
United Provinces .	Season, on the whole, favourable.	Failure of winter rains affected the unirrigated crop.	..	Winter oilseeds suffered severely from absence of winter rains. Sesamum was severely damaged by heavy rain in the west.	Crop severely damaged by continuous rainfall in September.	Crop damaged by excessive rainfall in parts.
Punjab	Season generally good.	..	Winter oilseeds suffered considerably owing to the failure of the winter rains. Season not favourable for sesamum.	Season was not favourable owing to abnormally heavy rains and floods after the middle of August.	Crop was damaged by excessive rain in August and September.
Bombay	Crop was damaged in parts from excessive rain at the time of harvest.	Conditions favourable.	..	Conditions good for winter oilseeds. Sesamum suffered at first from deficient rains and was thereafter damaged by excessive rain.	Crop damaged by excessive rains of September, October and November.	Crop suffered from low inundation at the beginning.
Central Provinces and Berar.	Seasonal conditions favourable on the whole.	Conditions not favourable.	..	Linseed damaged in several places by cold winds, cloudy weather, and absence of winter showers. Conditions were not favourable for sesamum.	Conditions were unfavourable on the whole.	..
Madras	Season generally favourable.	Continued rains damaged the crop at flowering in the Carnatic.	Crop damaged in places by heavy rains in January.	Season favourable except in the Deccan where it was poor.
Burma	Conditions favourable except in a few places where late rains were unfavourable.	Crop was somewhat affected by untimely middle and later rains.	..

* The figures are estimates and refer to provinces where the crops in question are extensively grown.
(a) The figures of exports under Jawar include those of Bajra also.

APPENDIX E.

*Resolution of the Government of India on the Report on the Enquiry into the Rise of Prices in India.***RESOLUTION**—By the Government of India, Finance Department.

The rise in prices in India, though in evidence from an earlier date, began to attract general notice from about the year 1907. In 1910 the Government of India decided to undertake a full and detailed investigation of the problem, and the task was entrusted to Mr. Datta, a senior and experienced officer of the Finance Department, assisted by Mr. Findlay Shirras, late professor of Economics of the Dacca College, and Mr. S. D. Gupta of the Finance Department. Mr. Datta was instructed to tour throughout British India, to collect and analyse the relevant statistics, to ascertain the views of both the official and non-official community, and to report his conclusions to the Government of India. The specific points referred for investigation were:—

- (1) What has been the actual rise in prices in India during the past fifteen years? Has the rise affected all commodities alike or is it specially marked in the case of food grains? Are there marked differences in respect of enhancement of prices as between different areas?
- (2) To what extent is the rise in prices due to what may be styled "world factors," and how far may it be ascribed to local conditions?
- (3) Does it appear that the rise is a permanent feature or is it only temporary?
- (4) If it be more or less permanent, what are its probable economic effects on the country as a whole, and on the different sections of the community?

2. Mr. Datta was placed on special duty in 1910. His report was received in 1913, and the complete subsidiary volumes of statistics, on which it is based, were finally ready by April 1914. The Government of India desire to place on record their appreciation of the care and industry which Mr. Datta and his assistants brought to bear on their arduous task. The report with its statistical appendices constitutes an almost complete survey of the progress achieved during the past 22 years. It brings together, and exhibits the inter-relation of, a mass of statistical material, drawn from a wide variety of sources, and illustrating the many-sided evolution of the country. Whatever view may be taken of the conclusions reached in regard to individual issues arising out of the terms of reference—some of which inevitably involve controversial points of economic theory—the report as a whole must be recognised as a very valuable contribution to the recent economic and financial history of India.

3. The general course of prices is indicated in the following table, taken from page 29 of the report, which exhibits the variations in average wholesale * rupee prices, during the years 1890 to 1912, of different groups of articles, for the 24 more or less homogeneous economic circles, into which, for the reasons noted in Chapter II of the report Mr. Datta has divided India exclusive of Burma and the Native States. The figure 100 represents in this table the average wholesale price of each group of commodities for the years 1890 to 1894, which have been selected by Mr. Datta as the standard or basic period for the purpose of estimating the fluctuations in the price level; and the prices of each group in the different years are accordingly shown as percentages of this figure:—

Years.	Food grains— Cereals.	Food grains— Pulses.	Sugars.	Tea and coffee.	Other articles of food.	Oilseeds, oils and oilcake.	Textiles—Jute.	Textiles—Cotton.	Other textiles.	Hides and skins.	Metals.	Other raw and manufactured articles.	Building materials.	General average.
1890	93	97	99	95	99	97	92	102	101	95	98	100	99	97

1912	143	141	111	85	136	156	160	137	98	172	128	132	149	141

* Wholesale prices have been used for the reasons noted by Mr. Datta on page 29 of the report, viz., that they are more sensitive than retail prices in reflecting industrial and trade conditions, and that retail prices in India correspond in their movements generally with wholesale prices, because the cost of retailing is extremely small.

4. It will be seen from the above table that—

(1) Apart from a slight rise in 1892-1893, the price level was fairly steady from 1890 to 1895. With a severe famine prevailing over a large part of India, the general index number rose to 106 in 1896, and 121 in 1897. The

APPENDIX E—*continued*

rise was practically confined to food grains, other articles of food and oilseeds. Agricultural conditions were generally favourable in the two following years, and food grains fell to about the level of the basic period. There was a considerable rise, however, under hides and skins, metals, and building materials, and the general level stood at 106 in 1898 and at 104 in 1899.

(2) With the advent of famine conditions in Northern India, the Central Provinces and Bombay, the general price level rose again in 1900 to 122. The proportionate increase was greatest under food grains and oilseeds, but was shared by almost all classes of commodities. In the following three years, the prices of food grains and oilseeds fell rapidly, the index numbers for 1904 being lower than the average of the basic period. Hides and skins and building materials continued to rise. The price of textiles (cotton) rose to 121 in 1904; and that of textiles (jute), after a fall in 1901-1903, to 109. The general level stood in 1904 at about the average of the years 1898-1899.

(3) From 1905 to 1908 prices rose rapidly and continuously. The general level rose to 116 in 1905, to 129 in 1906, and 133 in 1907. The highest point (143) was reached in 1908 when famine conditions prevailed in Northern India. The general average fell in the next 3 years, but that for 1912 was only slightly below the figure of 1908. The rise during this period extended to almost every kind of commodities.

5. The table on page 30 of the report, exhibiting the quinquennial average index numbers of wholesale (rupee) prices, indicates that the increase in prices in the years 1908-1912 has been most marked in the case of hides and skins, oilseeds, food grains, and building materials, which have risen 40 per cent. or more above the level of the basic period 1890 to 1894. The quinquennium 1908-1912 includes, however, the famine year 1908 and does not therefore accurately represent the proportionate rise in the various classes of commodities. A better index is the average of the triennium 1910-1912. During these years the proportionate increase as compared with the basic period has been greatest in the case of hides and skins (65 per cent.); raw cotton (58); raw jute (58); oilseeds (49); building materials (45). Food grains have risen 30 per cent., cotton manufactures 31 per cent., and metals 22 per cent.

6. The report analyses in some detail the local variations in the price level. Comparing the general average of prices in the years 1910-1912 with those for the basic period, the smallest increases (under 33 per cent.) are shown by the ports (except Karachi) and in Assam, where prices in the earlier years were somewhat above the general level. The rise has been greatest (38 per cent. and over) in Karachi, parts of Madras, Berar, Sind, the Bombay Deccan and the Punjab. In the quinquennium 1908-1912 the increase has been most marked (40 per cent. and over) in Karachi, Bundelkhand, Berar, Sind, South Madras, the north and west of the United Provinces, the North-West Frontier Province, the Punjab and the Bombay Deccan; and has been lowest (below 35 per cent.) in the ports of Calcutta, Bombay and Madras and in Assam. The variations reflect, it is clear, the agricultural conditions obtaining in the different circles during the years selected for comparison with the basic period. Taken as a whole, the provincial statistics illustrate strikingly the extent to which the development of communications has tended to equalise prices throughout the country.

7. Mr. Datta traces the rise in prices above analysed in part to causes peculiar to India, and in part to causes which have influenced the price level throughout the world. Under the former head the causes suggested are a comparative shortage throughout the period under enquiry in the production of food stuffs, the increased demand for India's food products and raw materials, both in India itself and in world markets, the development of communications internal and external, the decrease in the cost of transport, and the growth of banking and monetary facilities. Under the head of world influences he distinguishes the increased supply of gold, the development of credit, the destruction of wealth in recent wars, and the expenditure on armaments. In Mr. Datta's view, it is in the combined action of these numerous factors that the explanation of the great rise in Indian price levels is to be found.

8. As will be shown later, the relative importance of causes which may be classed as peculiar to India, and of causes which fall rather under the head of world influences, has varied greatly in the course of the years under review; and the latter have been on the whole the dominant factor in the upward movement of Indian prices. This movement has, nevertheless, been conditioned throughout by developments of an internal order, and amongst these Mr. Datta justly selects for special mention the great expansion of communications. As shown in the tables on pages 78, 79 and 82 of the report, between 1890 and 1912, the mileage of Indian railways rose from 15,865 to 31,981, the passenger and goods traffic more than trebled, and freight charges fell on the average by 28 per cent. During the same period the length of metalled roads increased from 36,400 to 51,900. This development in the means of communication, apart from its levelling effect already referred to, has brought all parts of the country into much closer touch with foreign markets, and has thus immensely facilitated and enhanced the influence in the direction of a rise which, as will be brought out further on, these markets have exercised on Indian prices.

9. Another factor of smaller, though still considerable, efficacy has been the improvement in banking and monetary facilities. Relatively to the immense developments in western countries, the Indian banking system is still in its infancy. Remarkable progress has nevertheless been made of late. As indicated in paragraphs 214 to 218 of the report, the paid-up capital and reserves of the Presidency and major joint stock banks (excluding the exchange banks) increased by 55.7 per cent. during the decade ending 1911. Private deposits available for commercial enterprise in the Presidency and joint stock banks, including exchange banks rose, from

APPENDIX E—*continued*

an average of about 26 crores in the five years 1890 to 1894, to an average of 61 in the quinquennium 1905 to 1909 and of 83 in the years 1910 and 1911. The increase has been exceptionally rapid since 1900. The deposits which in that year amounted to 31 crores, rose to 51 crores in 1905, 73 in 1909, 82 in 1910, and 85 in 1911. Again, between 1890 and 1912 the value of the cheques cleared at the clearing houses in Calcutta, Bombay, and Madras increased from 138 to 517 crores. There can be no doubt that, as observed by Mr. Datta (page 83, paragraph 214, of the report), the extended use of credit has had an important effect on prices.

10. A still greater influence has been attributed in some quarters to the large additions which, as shown in the table on page 90 of the report, were made to the monetary circulation, during the years 1903-04 to 1907-08, by the coinage of new rupees. It has been suggested that these additions were excessive, and in the long run largely contributed to, if they did not wholly cause, the exceptionally great rise in Indian prices. The facts set forth on pages 88 to 94 of the report indicate what little foundation there is for this suggestion. As shown on page 88 (paragraph 229), whenever the Government of India have coined more rupees, they have been compelled to do so by the depletion of their reserves, due to the demands of trade. In 1902-03 the percentage of the rupees held in the currency reserve to the total circulation of currency notes was 30·6; in 1903-04, 30; in 1904-05, 28·7; in 1905-06, 30·4; in 1906-07, 29·2; while in 1911-12, when coinage was again resumed, after having been in abeyance for some years, it fell to 25·1. Moreover, as Mr. Datta has clearly brought out on pages 91-92 (paragraphs 233 and 234), whilst the volume of metallic currency has expanded greatly since the year 1890, there is nothing to indicate that the increase has been larger than what has been required by the growth of business transactions. As far as can be judged from the suggestive statistics (page 93, paragraph 234) in which Mr. Datta has collated the leading data relating to external and internal trade, railway traffic, post office and treasury transactions, the capital of joint stock companies, the consumption of rice, wheat and coal, and the production of jute and cotton, the expansion of business as a whole has probably been more rapid than that of the metallic currency.

The Indian currency system of to-day is, in fact, as Mr. Datta brings out (page 88, paragraph 228), really quite as automatic as it was previous to the closing of the mints to the free coinage of silver. Additions to the rupee coinage are determined by the needs of the trade of the country, and the action of the Government is confined to fixing the amount of fresh coinage which it is desirable to undertake at any particular moment. If its action should prove inadequate, trade demands will force on further coinage; if it should be excessive, the surplus rupees simply lie in the currency reserves till called forth by further trade demands. A rise in prices which is not the result of a diminished supply of commodities must necessarily be attended by an increase in the volume of currency. Both facts are different sides of one and the same phenomenon. But the suggestion above referred to reverses the true order of causation. It has been the increased demand for Indian commodities and the rise in prices resulting, as will be shown later, therefrom, which has necessitated the increased coinage of rupees.

11. Amongst the other possible causes of a rise in prices which are grouped as peculiar to India, Mr. Datta devotes special attention to the interesting, but difficult, problem of the relation between the supply of food stuffs and the demand for food as measured by the growth of population. The conclusions he arrived at may best be presented in his own words: "Considering the growth of the population and the increase in the external demand" (he observes on page 61, paragraph 156) "the supply has been short during the greater part of the period embraced in the enquiry. The demand for both internal consumption and exports having increased at a quicker rate than the production of food grains, it is only natural that the general level of prices of food grains over a series of years would rise, although in a particularly favourable year it might have fallen to some extent. The food supply in India, compared with the demand, both internal and external, reached its lowest level in the quinquennium 1905-09, and this shortage of supply has doubtless contributed, in no small measure, to the unusual rise in prices during that quinquennium." And in the final chapter of the report, summing up the causes of the increase in the price level, he states that "in recent years the production of food grains has not been keeping pace with population. This would explain the almost continuous rise in the price of food grains" (page 188, paragraph 453). This result is attributed in part to unfavourable seasons, and in part to the failure of the area under cultivation to expand *pari passu* with the population; and on pages 64 to 66 (paragraphs 169 to 175), it is suggested that the substitution of non-food for food crops has to some extent been responsible for the latter circumstance.

12. It is evident that Mr. Datta intended these generalisations to be treated as qualified by his remarks elsewhere on the effect of the extended cultivation of non-food crops, and of the increased external demand for India's food products. Thus, on page 66 of the report, he observes that the total area which commercial crops have occupied at the expense of food grains is very small compared with the total area under cultivation of the latter, and consequently the effect of this substitution could not have been very great; and on page 96 (paragraph 240) in discussing the imposition of an export duty on food grains, he points out that the proportion of exports to the total production is ordinarily very low, not rising even in exceptionally favourable years much above 4 per cent. An even more important qualification is supplied by his confident and evidently well-founded conclusions—to which fuller reference will be made below—as to the generally beneficial effect of the rise in prices. The whole question, however, is one of much obscurity, and it may be convenient to bring together the leading data bearing on the problem.

13. Mr. Datta's main statistical results, as far as this question is concerned, are presented in the following table (page 58, paragraph 145), which compares the growth in population with that in the area under cultivation, and in the production of food grains. The figures have reference to the official year ending on the 31st March

APPENDIX E—continued

and the average of the first quinquennium is denoted by the figure 100, the figures for the years which follow being expressed as percentages of this :—

	Average of the quin- quennium 1890-91 to 1894-95	Average of the quin- quennium 1895-96 to 1899-00	Average of the quin- quennium 1900-01 to 1904-05	Average of the quin- quennium 1905-06 to 1909-10	1910-11	1911-12
Population	100	101.6	103.7	105.7	107.8	108.4
Total area under cultivation	100	98	103	105	108	106
Area under food grains	100	96	101	102	106	103
Production of food grains	100	98	105	99	113	109

As Mr. Datta, however, is careful to point out—page 54 (paragraph 134) and page 226 (Appendix D, paragraph 11)—the data from which this table has been constructed are, with the exception of the population statistics, largely conjectural and uncertain. For the immense areas of Bengal, Bihar and Orissa, for about one-third of the Madras Presidency, for the hill tracts in the United Provinces, and in Assam—and, it may be added, for the Native States, which, though excluded by Mr. Datta, cannot legitimately be ruled out of account—neither the area under cultivation nor the area under food grains is known with any accuracy; and for such areas Mr. Datta had no alternative but to base his statistics of cultivation on more or less arbitrary assumptions. Further attempts to estimate the total outturn of agricultural produce, even when the area is definitely ascertainable, are beset with insuperable difficulties. The normal yields per acre, the foundation of all such estimates, are notoriously untrustworthy. These yields have been revised from time to time—there has been some revision even since Mr. Datta's report was written—but the figures are still far from satisfactory, and the Government of India have had for some time under consideration the substitution of a more reliable agency for the conduct of the investigations from which the yields are ultimately derived. The remaining factor in the calculation, the percentage of the yearly outturn to the normal, is a still more uncertain quantity, resting as it does on district returns, which are little more than loose conjectures, vitiated in particular by a distinct bias in the direction of under-estimation. Finally, the whole mass of material, comprising elements of every degree of validity, has to be reduced by a complicated process of averaging and weighting, and it is evident from a study of the detailed results that here, too, considerable further difficulty has been experienced and divergent methods employed.

In such conditions, the sounder course from the statistical standpoint is to dispense with the superficial and misleading appearance of completeness, and to consider what inferences are suggested by a less ambitious enquiry, which confines itself to the more trustworthy of the available statistics.

14. The following table shows the total acreage under cultivation and the population during the period 1890 to 1912, in the tracts for which relatively accurate returns are procurable, viz., parts of Assam, the United Provinces exclusive of the hill districts, the Central Provinces and Berar, the Punjab, the North-West Frontier Province and the Bombay Presidency * :—

	Average of the quinquennium 1890-91 to 1894-95	Average of the quinquennium 1895-96 to 1899-00	Average of the quinquennium 1900-01 to 1904-05	Average of the quinquennium 1905-06 to 1909-10	Average of 1910-11 to 1911-12
Area under cultivation in acres	123,480,000	115,352,000	126,217,000	130,253,000	132,018,000
Index No.	100	93.4	102.2	105.5	106.9
Population	99,649,000	100,029,000	101,008,000	102,383,000	103,018,000
Index No.	100	100.4	101.4	102.7	103.4

Except during the quinquennium 1895-96 to 1899-1900, the figures for which reflect the results of repeated and severe famines, the area under cultivation has expanded more rapidly than the population.

15. The area under food grains during the same period was as follows :—

	Average of 1890-91 to 1894-95	Average of 1895-96 to 1899-00	Average of 1900-01 to 1904-05	Average of 1905-06 to 1909-10	Average of 1910-11 to 1911-12
Area in acres	101,121,000	93,978,000	101,213,000	103,055,000	103,332,000
Index No.	100	92.9	100.1	101.9	102.2
Population	99,649,000	100,029,000	101,008,000	102,383,000	103,018,000
Index No.	100	100.4	101.4	102.7	103.4

* (1) No figures have been included for the Madras Presidency. In one-third of that Presidency, as explained in paragraph 13, no accurate data are available. For the remaining two-thirds, or thereabouts, the figures are sufficiently correct for each year taken by itself, but cannot be used for the purpose of a comparison extending over a series of years, owing to the gradual extension of the reliable statistics, which is due mainly to progress of statistical work in respect of proprietary villages.

(2) Certain small areas in the Bombay Presidency, for which statistics are not available in all the quinquennia, have been omitted. A corresponding deduction has been made in the population figures.

(3) The figures of population in the different quinquennia have been calculated by the method of interpolation on the assumption of equal annual increments.

APPENDIX E—continued

Excluding again the famine quinquennium 1895-96 to 1899-1900, this table exhibits an almost precise parallelism between growth of population and extension of food cultivation ; and the only interpretation which the figures can bear is that the correspondence between the two has been substantially maintained.

16. These figures can, however, be supplemented to some extent. As already explained, it is idle to attempt any exact estimate of the yield of any given acreage—and without such exactitude, no further progress can be made on purely statistical lines, when a fractional discrepancy only remains to be dealt with. But it is known that the cultivated area at the close of the period under review included irrigated land to a considerably greater extent than at the outset, and the consequent improvement of outturn and increased certainty of securing it, must have more than counterbalanced any slight defect in area as compared with population, if indeed any such defect has existed. The statistics bearing on this subject, which have been extracted from the records of the Irrigation Department, are tabulated below.

Area in acres irrigated from State-owned sources.

AVERAGE OF TRIENNIUM							Average 1911-12 to 1912-13
1890-91 to 1892-93	1893-94 to 1895-96	1896-97 to 1898-99	1899-00 to 1901-02	1902-03 to 1904-05	1905-06 to 1907-08	1908-09 to 1910-11	
7,580,884	7,601,620	10,675,722	11,543,631	12,156,391	13,755,121	13,780,891	14,441,922

Area and outturn, moreover, are not the only factors involved. An additional factor of crucial importance is the great development of communications already referred to, and its incalculable effect in enhancing the "efficiency" of any given aggregate of food production. This principle, which is a truism of famine policy, is also applicable to the conditions of supply in normal years, and its bearing on the question of food supply must not be overlooked.

17. As applied to a country like India, which has the world's supplies to draw upon, the conception of an absolute shortage, which appears to underlie Mr. Datta's whole treatment of the subject, can have no valid significance. The real problem as regards a country so situated is obviously to determine whether the purchasing power of the people generally has increased. If that has been demonstrated in the case of India, as Mr. Datta affirms, it may be confidently inferred that the Indian community has continued to provide itself, to an at least equal extent, with the necessities of life, which constitute its first requirement. In this connection a very relevant consideration is that brought out by Mr. Datta on page 189 (paragraph 455), *viz.*, that "India has now to part with much less of her produce to meet her foreign obligations for the simple reason that her produce has risen in value in European markets." In virtue of this rise India has been in an exceptionally favourable position for procuring from outside sources such additional supplies of food as she may have needed ; though the statistics of imports of food grains on page 97 of the report do not indicate that in fact the internal supply has required to be supplemented in any markedly increased degree. The statistical study of food production, in short, while it has a certain value as suggesting a test by which to qualify conclusions independently obtained, cannot stand alone. In so far, however, as they admit of separate formulation, the following appear to the Government of India to be the principal inferences which can fairly be drawn from this branch of Mr. Datta's enquiries.

18. In the first place, strictly speaking, there has been no substitution of non-food crops in the country as a whole. The food cultivation area has grown, though the area under commercial crops has increased in a higher proportion ; and the more rapid expansion of the cultivation of jute and cotton in certain areas cannot, in view of the very small proportion of the total area which these crops occupy, have exercised any appreciable influence on the general level of food prices.

Secondly, so far as trustworthy statistical evidence is available, it would appear that the area under food crops has increased in almost exact correspondence with the growth of population—a fact which must be held to imply the production on the average of a relatively larger and more efficient food supply, in view of the large extension of irrigation and transport facilities. The statistical data relating to acreage under food crops do not, however, cover the whole ground, as information is admittedly wanting for large areas ; and, partly for this reason, and partly owing to the defective character of the information available regarding the other factors involved, no really reliable estimate of the outturn during the period under review can be framed.

Thirdly, as regards export of food grains, Mr. Datta has clearly brought out (pages 96-97, paragraph 240) the relative insignificance of the proportion between food exports and food production.

Finally, analysis of the general statistics in regard to the increase of prices elicits the very significant point that there was no sustained upward movement of food prices till after 1904. Even in 1892, very shortly after a large temporary increase definitely attributable to failure of the rains, food prices had reverted to practically the level of the basic period 1890-1894 ; and in 1904 they fell below it. The causes of the rapid and sustained rise subsequent to this year, which is even more conspicuous in the case of a number of other commodities, must be sought for in a different and independent group of circumstances.

19. The point last mentioned leads up to a distinction, the fundamental importance of which, though not entirely unrecognised in the report, has been overshadowed in the attempt to deal with the question of food

APPENDIX E—continued

prices as a self-contained problem. The essential fact which emerges from Mr. Datta's enquiry, is the division of the history of Indian prices since 1890 into two well marked periods dominated on the whole by widely different conditions. From 1890 to 1904 internal conditions were the principal factors in the determination of the price level. Prices rose and fell in the main in accordance with changes in the agricultural conditions from year to year. The only articles which show a continued rise during this period are hides and skins, the prices of which are governed by those prevailing in the world markets; building materials; and after 1897, metals. With these exceptions, the only indication of a permanent upward tendency in prices is the increase in the prices of exports from 1900-1901, which affected to some extent the general level in that and the four following years. Whilst the volume of export trade expanded slowly between 1890-1891 and 1899-1900, the average prices of Indian exports, as shown on pages 137-138 (paragraph 334) of the report, were lower in the quinquennium 1895-1896 to 1899-1900 than in the preceding five years. There are signs in the general foreign price level, the statistics regarding which are exhibited in the table on page 48, of an upward movement after 1896, but the advance shown, apart from the exceptional year 1900, was not very marked in most countries, nor does it appear to have exercised any considerable influence on Indian prices till some years after the opening of the new century.

20. With the year 1905 Indian prices entered upon a new phase. Prices rose rapidly to unprecedented heights, and so far there is nothing to suggest the probability of a reversion to the levels of former years. The explanation of this remarkable phenomenon cannot be found in changes of an internal nature; and examination of the statistics of prices in other countries indicates clearly that the increase in Indian prices has been broadly synchronous with a general upward movement in price levels throughout the world, and that its origin must accordingly be sought in causes more or less common to the whole civilised world. In the United Kingdom prices, taking the average of the *Economist's* and Sauerbeck's index numbers, rose between 1903 and 1912, 25 points; in Germany between 1902 and 1911, 35 points; in Italy between 1902 and 1911, 21 points; in Belgium between 1897 and 1911, 27 points; and in the United States between 1899 and 1912, 33 points. As to the precise causes responsible for this phenomenon economic authorities are not as yet completely agreed, but the worldwide character of the rise, and the broad parallelism between this and the upward movement of Indian prices since 1904, are indisputable.

21. The influence on the Indian price level of this notable change in world prices can be traced clearly in the statistics of foreign trade. As indicated above, the average price of exports rose to some extent between 1900-1901 and 1904-1905. But from 1905-1906 onwards the increase has been altogether unprecedented. As shown in the table on page 138 of the report, during the quinquennium 1905-1906 to 1909-1910, the value of Indian exports * exceeded by rather more than 116·6 crores, or an annual average of 23½ crores, the value which would have been represented by the same quantities dealt with at the average rates prevailing during the basic period. In 1910-1911 and 1911-1912 the difference in value was even greater, being 42·12 and 48·58 crores respectively. Of these increases, cotton contributed † about 22 per cent., jute about 28 per cent., hides and skins about 9 per cent., seeds about 13 per cent., and grains and pulses about 9 per cent. It is to this immensely enhanced demand for Indian commodities of export that the relatively larger rise in the Indian price level as compared with that of other countries is probably to be attributed. While the rise since 1904 in the prices of imports, which reflect more accurately than exports the general course of world prices, has been considerable and has assisted materially to raise the Indian level, it has been proportionately much smaller than in the case of exports.

22. The social effects of the rise in prices during recent years have been the theme of much discussion in every country. As regards India Mr. Datta's conclusion, as already stated, is that on the whole they have been beneficial. His views on this aspect of the enquiry are summarised in the following extracts from pages 184-186 and 189 of the report.

“There has undoubtedly been a real progress, an increase of wealth and a general diffusion of it, in consequence of an increase in the profits of agriculture, and a remarkable increase in wages greater than the cost of living in almost all parts of India during the period of rising prices. There has indeed been a very great increase in the annual income of India. Dr. Marshall defines a country's income as ‘the net aggregate of commodities and capital, material and immaterial, including services, produced annually by the labour of the country acting upon its natural resources.’ It is beyond all doubt that in recent years there has taken place with the development of the resources of the country and the growth of enterprise on the part of the community as a whole, a very considerable increase in this annual income.” (Page 184, paragraph 439.)

“The standard of living amongst all classes of the population, especially among landholders, traders and ryots, has increased very considerably in recent years, and extravagance on occasions of marriage and other social ceremonies has seriously increased. The average villager lives in a better house and eats better food than did his father; brass and other metal vessels have taken the place of coarse earthenware, and the clothing of his family in quality and quantity has improved. We may also say that the increase in passenger miles travelled predicates the existence of spare money to pay for railway fares.” (Page 185, paragraph 443.)

“The wage-earners of all classes and in all circles have secured an increase in wages commensurate with

* As explained by Mr. Datta on page 139 of the report, the table on page 138 represents the values declared and calculated, of about 99 per cent. of the exports, because it was not possible to ascertain the quantities of exports in the case of the remainder.

† For the reason given in the preceding note, the percentages cannot be calculated with absolute accuracy. The margin of error, however, is insignificant.

APPENDIX E—continued

the rise in the cost of living. The only exceptions are domestic servants in cities and other urban areas in a few circles, and wage-earners employed in some industries." (Page 186, paragraph 445.)

' Landlords have, except in some special areas, received increased cash rents, cultivators increased profits from agriculture, and wage-earners generally have gained in consequence of their wages having increased more than prices. It is only persons on fixed salaries or dependent on income from securities and shares, and professional men who live upon customary fees, who have suffered from the rise in prices, as their income, not being at all elastic, has not risen sufficiently to meet the increased cost of living. The effects on the different sections of the community in different areas have been in the same direction and differ only in degree." (Page 189, paragraph 455.)

23. That there has been during the last 20 years a remarkable growth in the general prosperity of India is a fact recognised by all impartial observers, and testified to by all the available statistical evidence. The volume of foreign trade has grown enormously. The quantities of goods carried by rail rose from 23 million tons in 1890 to 48 million in 1903, and 71 million in 1911. The number of passengers by rail increased from 114 million in 1890 to 210 million in 1903, and 390 million in 1911. The value of money orders issued rose from 16.4 crores in 1890-91 to 32.1 in 1903-04, and 48.7 in 1911-12; and the fresh deposits in Savings Banks from 2.68 crores in 1890-91 to 4.66 in 1903-04, and 8.28 in 1911-12. The absorption of gold has been of late on an unparalleled scale, amounting between 1900 and 1911 to no less than 116 millions sterling, as against 27 millions sterling in preceding 12 years. Great strides have been made in the manufacturing and mining industries. The number of looms and spindles rose, between 1903-04 and 1911-12, in cotton mills from 41,977 and 4,900,100 respectively, to 81,899, and 6,040,760; in jute mills from 18,400 and 376,718 to 32,927 and 677,519; and in woollen mills from 633 and 23,806 to 772 and 29,369; whilst the production of coal has about doubled since 1901. But the most striking evidence perhaps of the improving condition of the people is to be found in the statistics of the import of articles of luxury and convenience such as kerosene oil, apparel, boots and shoes, matches and soap, which increased by 26 per cent between the basic period 1890-91 and 1903-04; and by 74 per cent between the latter year and 1911-12. On all sides there are indications of a higher standard of living.

24. That the rise in prices has contributed to this result is indicated both by the comparatively more rapid expansion under the heads above mentioned since 1904, and by analysis of the statistics of foreign trade. A country necessarily benefits by any special demand for its exports, and as has been shown, the demand for Indian exports has expanded immensely since 1904-05. Against the gain in this direction has to be set the increased cost which India has had to pay for her imports; but Mr. Datta estimates (pages 138-139, paragraphs 335 and 336 of the report) that, allowing for the increase in the cost of imports, the annual gain to India through the enhanced prices obtained for her exports amounted during 1900-01 to 1904-05 to 3.1 crores, during 1905-06 to 1909-10 to 14.7 crores, and during 1910-11 and 1911-12 to no less than 34.2 crores. It is impossible in the face of these figures to doubt that India as a whole has benefited by the rise in the price level since 1904. It is a matter of greater difficulty to measure the resulting gain or loss to different sections of the community. Adequate data do not in fact exist for any precise and minute measurement of changes in real income or real earnings. Comparison between the prices of goods produced or wages earned, and the prices of goods most commonly consumed, furnishes, however, a rough index of the effects of the rise in prices on the various classes.

25. The most important section of the community are the cultivators, who comprise, according to the census of 1911 (Volume I, Part II, Table XV), more than half the total population. As a rule cultivators grow their own food, and to ascertain therefore the changes in their real income resulting from the rise in prices comparison has to be made between their expenditure as measured by their payments for rents or land revenue, wages and commodities purchased, and their income as measured by the prices secured for produce sold. The general conclusion to be drawn from this comparison is unmistakable. On the income side, in the quinquennium 1908—1912, the wholesale price of raw jute was 43 per cent above the level of the basic period 1890—1894, that of raw cotton 45 per cent, of hides and skins 59 per cent, of oil-seeds 45 per cent, of food grains (cereals) 42 per cent, and of food grains (pulses) 43 per cent. On the expenditure side, cotton manufactures, the largest item in the normal expenditure of the cultivator, rose only 25 points, the cost price of salt fell by 3 per cent apart from the reduction of the general rate of duty from Rs. 2-8-0 to Re. 1-0-0 a maund, metals rose 20 per cent, and sugar 9 per cent, while kerosene oil shows no great increase. The movements of rents have varied greatly in different areas, and as regards the different classes of tenants. Grain rents, as measured by their cash value, have no doubt risen proportionately to the rise in prices, but cash rents in general have lagged behind prices; whilst the enhancements of land revenue in ryotwari areas, so far as attributable to the rise in prices have been comparatively small. Wages have risen more rapidly even than prices. But, on the balance, the gain in real income is manifest.

26. The valuable wage tables prepared by Mr. Datta point to a great improvement in the condition of the wage-earning population. The collection of reliable statistics of wages has always been a matter of great difficulty in India; and Mr. Datta's figures do not in all respects agree with those of the wage census carried out in the years 1911-12. There is no reason to doubt, however, that they represent with sufficient accuracy the broad trend of wages. In many countries wages have only slowly adapted themselves to the rise in prices; and the necessary readjustment has been attended with much social friction. But in India circumstances have favoured the wage-earner. The increasing profits of agriculture, which as shown in Mr. Gait's report on the census of 1911 (Volume I, paragraph 530) have enhanced the demand for labour on the land, the demand for

APPENDIX E—concluded

labour of public works, the expansion of the factory industry already referred to, and in parts the mortality from plague* have combined to promote a great and rapid increase in wages during recent years.

27. Agricultural labourers still constitute the largest section of the labouring population. For many reasons changes in the real income of this class are peculiarly hard to measure. Payment in kind is still common; there are great variations in the continuity of employment; and in parts hereditary or customary obligations affect the rate of remuneration. But the statistics, compiled by Mr. Datta, of cash wages paid to independent labourers indicate, roughly the general movement of earnings since the basic period. As compared with this period, cash wages, by 1912, had nearly doubled. When every allowance has been made for the disturbing factors have alluded to and the rise in prices, Mr. Datta's estimate (Volume III Statistics, page 203) of an increase of 38 per cent in real income in 1912, as compared with the basic period 1890—1894, seems fully justified.

28. Equally or little less remarkable has been the rise in the real earnings of general labourers and artisans in villages, urban areas and cities. The statistics show advances in money wages ranging from 77 to 98 per cent since the basic period. The case of factory hands, however, is more complicated. Wages in factories were in the earlier years above the general level; the rate of increase has accordingly been smaller, and has varied much, both as between different industries, and as between factories of the same kind in different provinces. In the absence of detailed family budgets, which Mr. Datta found it impossible to prepare, and of information as to periods of unemployment and overtime, no exact comparison of nominal and real wages can be made. Wages, however, have been rising rapidly in all factory industries since 1903, and it seems fairly certain that in the jute, wool, leather and mining industries, in the paper industry as a whole, and in the cotton mills of Calcutta, the United Provinces and the Central Provinces, they have risen faster than the cost of living. In the cotton mills of the Bombay Presidency, however, where wages in the basic period were higher than in other parts and are still relatively high, and in those of Madras, it is doubtful whether the rise in money wages, considerable though it has been of late, has fully kept pace with the rise in prices.

29. Wages on railways exhibit similar variations. In Sind, Gujarat and in the Bombay Deccan, where in the basic period they ruled high, wages have possibly lagged behind prices of late. But on the whole the wage-earners on railways seem to have secured increases in pay more than proportionate to the increase in the cost of living. The same is true for the most part of domestic servants.

30. In the case of the upper and middle classes, material is lacking for any but the most general estimate. The considerable expansion in the income tax receipts suggests, what indeed would seem to be obvious that for the trading community the period has been one of growing prosperity. Cultivating proprietors have undoubtedly benefited, while in the case of landlords it has to be remembered that, if rents have risen less rapidly than prices, on the other hand, as indicated by Mr. Datta on page 145 (paragraph 345) of the report, "the share of the increased profits taken by Government as the supreme landlord is a comparatively small part of the total increase which has accrued from the rise in prices." Persons on fixed incomes have certainly suffered, and it is Mr. Datta's opinion that the professional classes too have been adversely affected, but the circumstances of this section of the community do not appear to have been made the subject of detailed statistical investigation. It may be observed, however, that in the case of the lower paid Government servants, civil and military, various measures in the direction of increased pay have been taken of recent years.

31. It has been shown that the prolonged rise in Indian prices dates from the year 1905, and that its ultimate origin must be sought in causes which have been operative throughout the civilised world. As the growth of communications

Future course of prices.

within India has tended to equalise prices throughout the country, so the parallel development of communications with foreign countries has tended more and more to bring Indian prices into line with those of the world in general. The prices of Indian exports are governed by those prevailing in the world's markets, and through the growing influence of foreign trade, Indian prices, apart from temporary fluctuations resulting from the character of the seasons, tend to follow the same course as world prices. The problem of the future course of prices in India is one therefore to which no solution can be found in the analysis of Indian conditions only. It is essentially bound up with the question of the movement of prices throughout the world. Prices have so far shown no sign of reverting to former levels. As regards the future, the factors involved, even under normal conditions of evolution, are too numerous, too complex, and too incalculable in their operation to warrant any definite and confident prediction: and the normal course has now been interrupted by the catastrophe of general war, the total effect of which upon the highly organised western systems of production, trade and finance it is quite impossible to forecast.

* It is important not to overestimate the economic effects of plague which, though a grave calamity accounted only for a small proportion of the total deaths in the period under review, and left large tracts of India practically unaffected. Out of 132½ million deaths reported in British India between 1896 and 1913, rather less than 7 million deaths were attributed to plague.

This opportunity may be taken of correcting some statements on this subject in paragraph 71, page 26, of the report:—

(1) The report states that between the first official intimation of plague and the census of 1901, ¾ million had died of the disease. The correct figure is about 424,000.

(2) The report states that the mortality in the town of Dinga in 1907 was 119·20 per mille. It should have been added that the population of this town was only 5,412, so that it cannot be taken as a general index in regard to the Province.

(3) The report states that "since the Black Death of the 14th century, there has never been such mortality from plague as in India between 1896 and 1912." The Government of India are not aware that authority exists for this categorical statement.

APPENDIX

† The rates of wages shown under "workers in iron and hardware" relate to "blacksmiths."

† The first wage census was taken in December 1912 and the second census in December 1917.

(a) The lower rates are generally paid in cotton mills and the higher rates in workshops where the work is comparatively heavy.

(b) No daily labour is employed.

(c) Daily rate has been worked out by dividing the monthly rate reported, by 25, the conventional number of working days in a month.

* The first wage census was taken in December 1912 and the second census in December 1917.

† The second wage census was taken in March 1917.

‡ Urban areas in Assam were not included in the wage census of Eastern Bengal and Assam taken in August 1911.

(a) Figures relate to the annual wage census taken in June of each year in the quinquennial wage census form.

(b) Daily rate has been worked out by dividing the monthly rate reported, by 25, the conventional number of working days in a month.

(c) No hired labour is employed in this industry.

(d) Figures relate to Budnur town in Betul district, those for Betul town not reported.

* The figures for 1911 relate to the half-yearly census which was taken in June 1911 in the quinquennial wage census form and they represent the minimum and maximum wages prevailing in each town. Owing to new method of collecting and recording the statistics for 1916, they are not comparable with the earlier figures.

† The rates for 1916 against Burma relate to Blacksmiths.

(a) No hired labour is employed in this industry.

(b) Daily rate has been worked out by dividing the monthly rate reported, by 25, the conventional number of working days in a month.

(a) Daily rate has been worked out by dividing the monthly rate reported, by 25, the conventional number of working days in a month.
(b) Ploughmen are rarely kept throughout the year.
* The coolies also work for merchants and others.

(a) The figures stated against Kissanganj are distinct from the rest of the district.

(b) The first wage census was taken in December 1912 and the second census in December 1917.

Blacksmiths in the Punjab are generally paid by a share of produce at harvest.

(c) Girdih only. All rates are higher in Girdih than in Sadr.

(d) Relate to Begusarai sub-division of Monghyr.

(e) Relate to South Monghyr.

(f) A tendency to go to Rs 5-0 in Sadr.

(g) For Khundi sub-division only, elsewhere no daily wages are paid.

* Blacksmiths in the Punjab are generally paid by a share of produce at harvest

† The first wage census was taken in December 1912 and the second census in December 1917

‡ The rates represent the highest and lowest wages prevailing in each district or circle
(a) No daily or monthly wages are paid in rural areas of this district. Unskilled labour is provided by the agriculturists themselves who help each other in return for meals, and artisans receive their meals and a lump sum on completion of the work. The ploughmen's work is done by a class of servants called "Baithas" who are provided with food, clothes and bedding and are also sometimes paid a fixed sum of money for their life-long service
(b) No daily wages paid to artisans in rural areas of this district
(c) Carpenters and blacksmiths are given a share of grain at harvest time
(d) Include Jethana, Srinagar, Gangwana, Ramsar and Doodhu Circles
(e) Include Kekri and Bhinal Circles
(f) Include Kotra, Jawaja, Nayanagar, Dewair, and Bhallan Circles

* The first wage census was taken in August 1913 and the second census in August 1918

† The annual wage census taken in June of each year in the quinquennial wage census form. The figures relate generally to the developed tracts of the smaller tahsil of each district

‡ Relates to Jalgaon Taluk

(a) Carpenters get Rs. 4-0 per annum for each plough. They get 12 annas for preparing each mayal for a house, 2 seers of grain are given at sowing time and 5 seers at harvesting time

(b) Village carpenters as a rule get 1 maund of grain per plough for making and repairing implements of husbandry

(c) Carpenters generally receive grain valued at Rs. 0-12-0 to Rs. 1-4-0

(d) Relates to the developed tract of the Khandwa tahsil

(e) These men go from town to work in the interior

F—continued

the quinquennial wage census held in 1911 and 1916—continued

no information was received]

* The figures for 1911 relate to the half-yearly census which was taken in June 1911 in the quinquennial wage census form. The rates represent the minimum and maximum wages prevailing in each district. Owing to new method of collecting and recording the statistics for 1916, they are not comparable with the earlier figures.

† Cash wages, cash rates not being available

(a) Daily rate has been worked out by dividing the monthly rate reported, by 25, the conventional number of working days in a month
